Established: March 18, 1901

County Seat: Denver

THE CITY AND COUNTY OF DENVER

By William H. Bauer

Until very recently Denver was unique in Colorado in that the boundaries of the City of Denver coincide with the boundaries of Denver County. In the twenty-first century, the City and County of Broomfield was authorized.

In both cases the creation of these combined entities was to eliminate the administrative and legal entanglements that often arose when what was obviously a cohesive community was spread over several administrative jurisdictions - towns and or counties. To whom would you complain when you had a problem? Which taxing authority was responsible for maintaining services and infrastructure? The solution in each case was to create a single city and county authority.

On November 1, 1861 the Colorado Territorial Legislature authorized the establishment of seventeen counties. The area that would become the City and County of Denver was on the western edge of Arapahoe County, which at the time stretched eastward to the Kansas state line.

Arapahoe County was gradually reduced in extent and in 1901 attained its present boundaries with the creation of Adams County on April 15, 1901 and the City and County of Denver on March 18, 1901.

From 1858, the time of the first settlements at the junction of Cherry Creek and the South Platte River, the area that would become Denver was the location for a multitude of small communities and residential developments. Some of these were separately incorporated and had their own elected governments, while others relied on Arapahoe County to provide services.

The negotiations to create the City and County of Denver were lengthy and complex, but eventually agreement was reached and these independent communities were included in the new governmental entity. The result was a county with very irregular boundaries. The western boundary is Jefferson County. Adams County bounds Denver on the north and northeast and Arapahoe County bounds Denver on the southeast and south.

Since the original establishment there have been modifications to the boundaries with the inclusion of formerly undeveloped areas. However, today the City and County of Denver is hemmed in by a number of rapidly growing cities that likely foreclose any extensive future expansion of the City and County of Denver.

From its beginnings Denver has been the commercial center, first for the Territory of Colorado and then the State of Colorado. The city has grown from a local center to the primary center for the Central Rocky Mountain Region. Today one speaks not of Denver but of the Denver Metroplex, or even the Front Range Corridor, an increasingly continuous development reaching from Pueblo through Colorado Springs, Denver, Fort Collins and Greeley to Cheyenne, Wyoming. This area has become a complex of residential developments and high-tech industries.

The early communities at the junction of Cherry Creek and the South Platte River were the location fed by several immigrant trails from the east and from which trails branched west to the mining camps in the mountains.

The wagon trails were supplanted by railroads and Denver became the principal rail center of the Rocky Mountain Region. In the twentieth century motor highways came to parallel the railroads and supplanted many of them. With the development of the air transport industry, Denver, first with Stapleton Airport and now Denver International Airport, has become a major center for air passenger and freight traffic.

The history of Denver and its suburbs, has been the subject of numerous books and articles. It is not the purpose of this text to delve deeply into that history, therefore I refer to that extensive resource for more details on the fascinating history of one of our most prominent and attractive cities.

POST OFFICE LOCATIONS IN THE CITY AND COUNTY OF DENVER

Describing the locations of the post offices that are, or were, within the boundaries of the City and County of Denver presents a different situation than is the case for the other Colorado Counties. There is much more information available and for the most part it permits me to list a more definitive location.

However, the situation is complicated by the fact that many of these post offices moved one or more times. And most that were once independent post offices were eventually converted to stations or branches of the Denver Post Office.

Also included in this section of *The Colorado Postal Encyclopedia* are several stations and branches of the Denver Post Office that are located beyond the boundaries of the City and County of Denver. This includes offices in Arapahoe, Jefferson and Adams Counties.

One serious complication to interpreting the street locations from the nineteenth and very early twentieth century is that the street naming and numbering scheme for Denver has been drastically modified more than once. Thus it is necessary to locate the addresses on a period map and then identify the corresponding location on a modern street map of Denver - not an easy task. I make no guarantees that I have done this correctly in every case.

DENVER STREET NAMES

The naming of streets in the Denver Metropolitan Area is one of almost continuous change. Most of the changes were minor, but over the years major changes were made in 1893, 1897 and in 1904.

The City of Denver had its own system including the skewed pattern of streets in the downtown area. Most of the suburbs also had their own systems. The situation got so bad that finally Howard C. Maloney, a member of the staff of the Denver Union Water Company, devised a system that drastically improved the hodge-podge naming and numbering system, which had evolved prior to 1897.

Now, in the twenty-first century, most of the Denver Metropolitan Area, including parts of Arapahoe, Adams, Boulder, Broomfield and Jefferson Counties use the Maloney system.

The Maloney system uses Broadway as the zero north-south axis and Ellsworth Avenue as the zero east-west axis. Ellsworth became the dividing line between the north and south because although Colfax Avenue was the appropriate dividing line, it would have required changing many streets already numbered from Colfax Avenue (the traditional 15th Avenue). Thus, when the streets are numbered south from Colfax Avenue, Ellsworth Avenue became zero.

An elaborate system of alphabetized streets was also instituted at that time with the result that a large percentage of the area's addresses received new street numbers and names. No matter how inconvenient at the time it might have been for the public and businesses, it was all for the common good.

Under the Maloney System, east side and south side street numbers are even and west side and north side street numbers are odd.

FEDERAL LAND SURVEY POST OFFICE LOCATIONS

Using the US Geological Survey Map of Denver County and the Pierson Graphics Corp. *Atlas - Street Guide to Metropolitan Denver*, I have converted the locations in the Post Office Department Geographical Site Location Reports to current street boundaries of those descriptions. They are presented in clockwise order - north, east, south and west sides. The interpretations follow the locations in the Chronology of the Post Office segments. They are shown in a different typeface. These are only area locations, usually a 160-acre tract and in a few cases a 40-acre tract. For additional information, refer to the street locations that may also be listed preceding the Chronology section.

STREET LOCATIONS

Two sources of street locations have been used in the following discussions and listings. Prior to 1990, Jim Ozment was visiting in one of the offices at the main Denver Post Office. At that time he was

shown a group of 4x6 file cards and told that the cards were about to be thrown out. These were indexes to the stations and branches of the Denver Post Office. The cards were offered to Jim, if he wanted them. Of course he did. The information on those cards then became the source for the locations of the Denver Stations and Branches that we included in our 1990 book - *Colorado Post Offices 1859 - 1989.*

The second source is an unpublished document that was researched by Erwin Engert and Jim Ozment. That document was based largely on a review of Denver City Directories from the 1880's to the 1910's. The addresses from those directories are included below as "Locations" preceding the Chronology of the Post Office section. Where it can be determined, the changes in street names have also been given for those locations.

POSTMASTER AND POSTMARK LISTINGS FOR THE CITY AND COUNTY OF DENVER

Compared to several other counties the City and County of Denver does not encompass a great number of former independent post offices. But the Denver Post Office, serving its large population and extensive commercial activities has produced a very large number of postal markings. With that consideration I feel that this chapter of *The Colorado Postal Encyclopedia* requires a somewhat different treatment from that employed with the sixty-three other counties of Colorado.

Therefore, I have chosen to produce this chapter in two sections. The first section will be a conventional listing of the formerly independent post offices that are now within the boundaries of the City and County of Denver. This approach will make that first section more cohesive and I hope easier to use. The history and postmaster listing for Denver will be included in that first section.

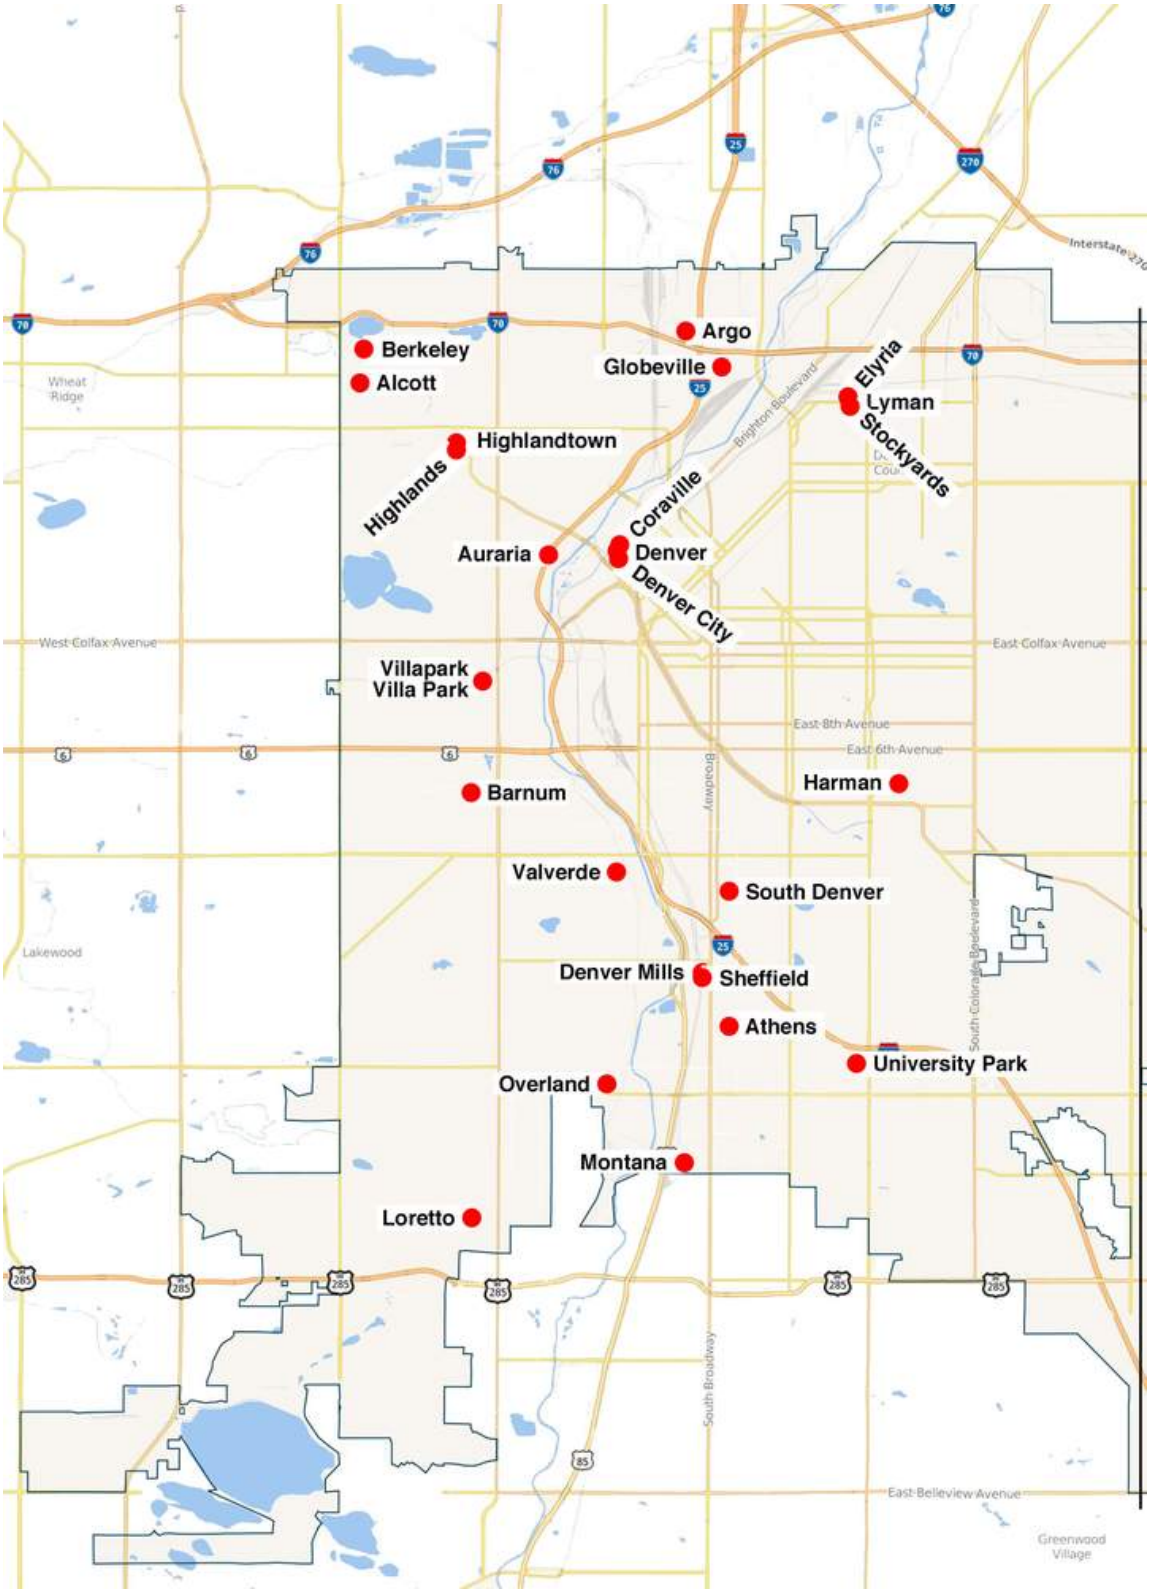

The second section will be the postal markings used by the Denver Post Office and its stations and branches. Because this text and its listings are being prepared well in advance of publication it is certain that there will be a number of new postal markings originating from Denver and its affiliates. By separating the Denver postmark listings from the remainder of the section, I should be able to easily add the new postal markings before publication of this chapter.

With the exception of Colorado Springs it has been my approach to list the postmarks in chronological order. However, that approach does not make sense for the extensive listing of postal markings from Denver. Therefore the Denver postmarks have been subdivided into several rough classifications. That should make reference to the listings a simpler task. There is a brief introduction to each of those groupings.

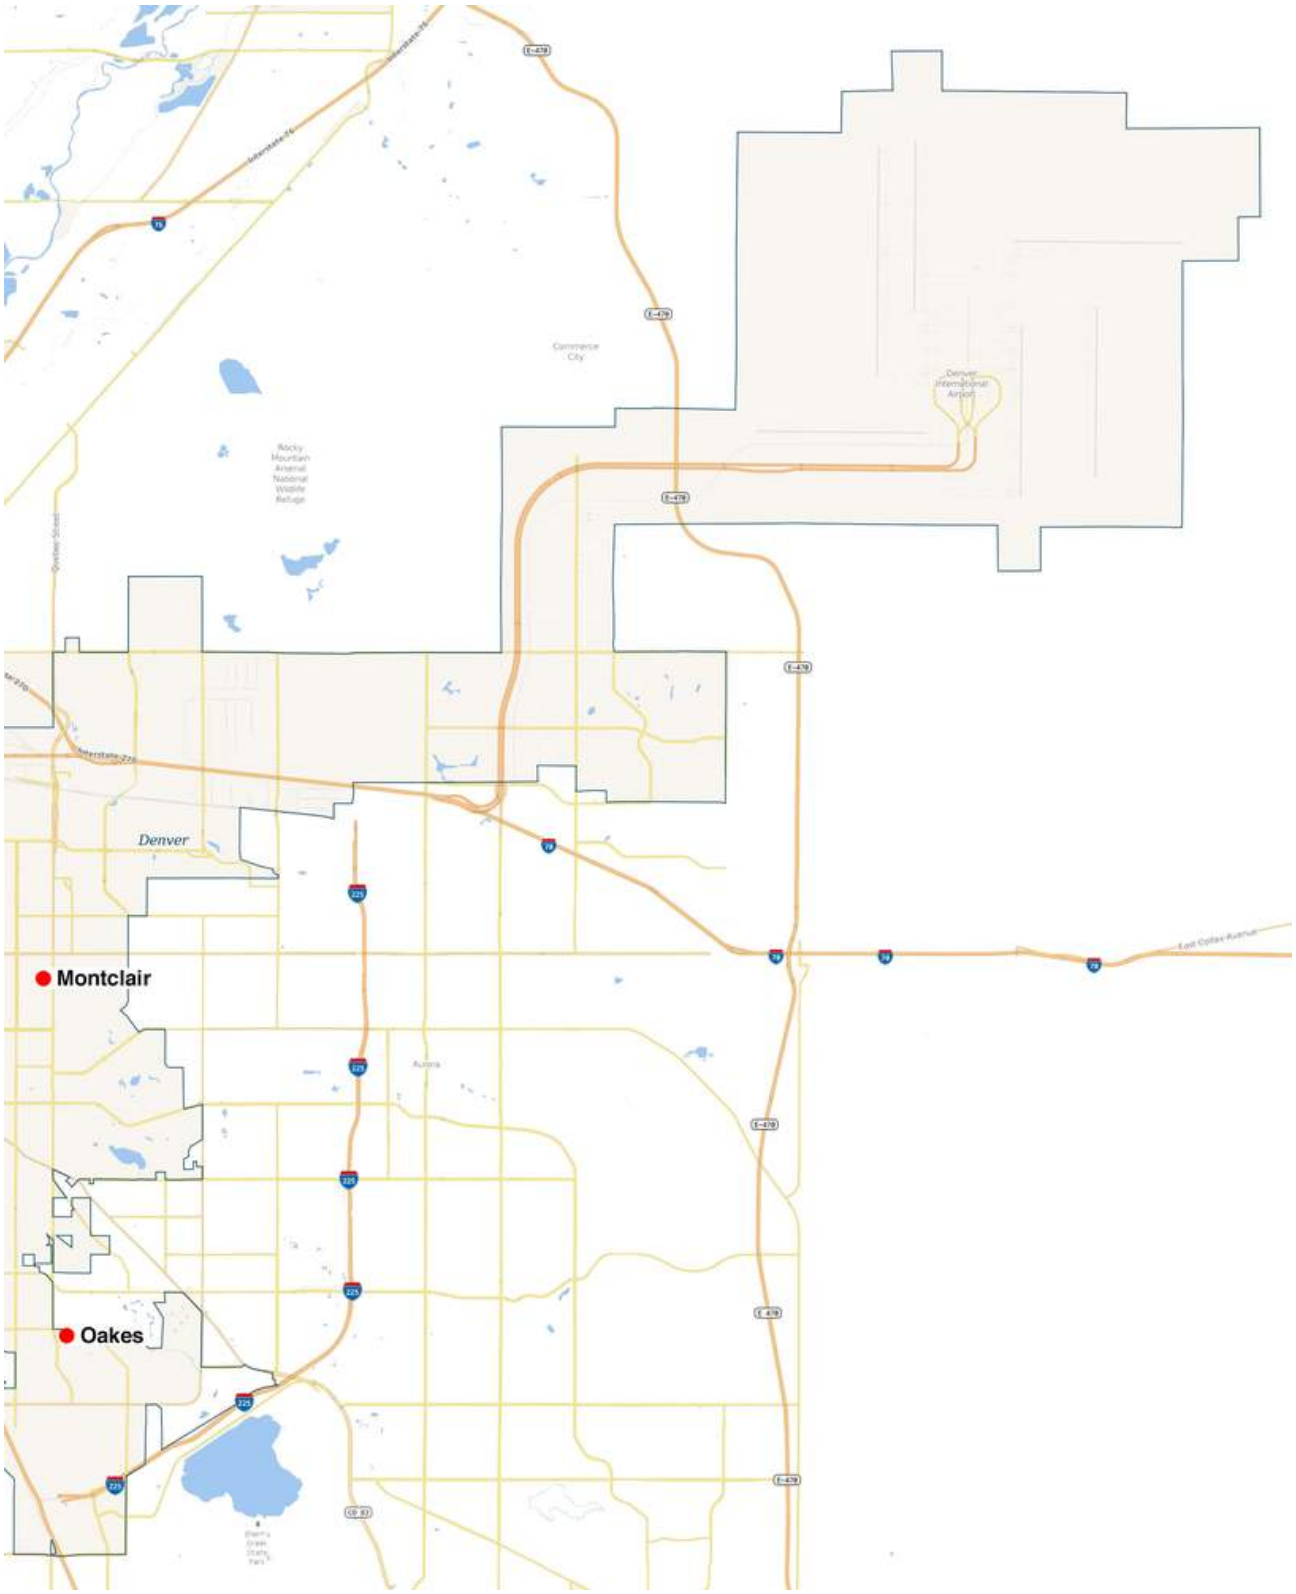

It should be emphasized that because of its size and the volume of mail handled by the Denver Post Office, at any given time multiple postmarking devices were in use. That is particularly evident with the introduction of machine postmarking devices. Unfortunately machine postmarks have not been extensively collected. Number and or letters identified the multiple machines canceling dies. I have had access to and recorded, a large number of these, but it is very evident that there are many that have not come to my attention. That should not be considered an indication of rarity.

Since the canceling portion of the machine postmarks are virtually identical, regardless of the particular die identifier, I have chosen to illustrate the individual postmark dies but not show the repetitive cancel portions. That decision applies to both the normal postmarks and the slogan postmarks.

In the case of slogan postmarks that were used on an annual basis, it is quite possible that the slogan portions will show minor variations from year to year. I leave that research to the specialists.

Post Office Location Map – West Denver County

Post Office Location Map – East Denver County

ALCOTT

Alcott was a platted town established in the 1890's. It was northwest of Denver proper and just north of the Elitch Gardens Amusement Park, which opened in 1904.

My reading of Colorado history has not produced information as to the date the Alcott plat was filed or who was responsible for doing so.

In 1896 the Berkeley Post Office was moved to Alcott. In 1902 the community of Alcott was incorporated into the City of Denver. In 1904 the Alcott Post Office was converted to a station of the Denver Post Office.

The specified locations of the Alcott Post Office, in the vicinity of Tennyson Street, are all within the active modern business district of the Alcott neighborhood.

Locations 1899 - Prospect Avenue, northeast corner of 22nd
Now West 38th, northeast corner of Utica
1900 - Prospect Avenue between Tennyson and 22nd
1935 - 3977 Tennyson

ARGO

In 1878 the Argo Smelter was moved from Black Hawk to a location some two miles north of the Capital. The location was on the Colorado Central Division of the Union Pacific Railway. Smelting operations at the new location began on January 1, 1879.

The Boston & Colorado Smelting Works was founded in 1878 by ex-senator Nathaniel P. Hill. The Argo Smelter was the company's principal operation.

In 1889 a fire destroyed the facility. It was partially rebuilt but it produced only matte which was shipped to Omaha for the final steps in refining. Copper ore was an important constituent in the smelting process and difficulty in obtaining copper ores from local sources led to the closure of the smelter in 1910.

The community of Argo developed around the smelter in order to provide housing for the workers. The name refers to the ship from *Jason and the Golden Fleece.*

Argo was incorporated on January 12, 1880 and its boundaries were Broadway, West 44th Avenue, Pecos Street and West 49th Avenue. On December 1, 1902 Argo was annexed to Denver.

The location of Argo now lies within the popularly labeled Mousetrap, the complex intersection of Interstates 25 and 70. What is not occupied by the interstates is commercial development including the Village Inn Restaurant and a large Best Western Motel.

Locations 1898 - Division Street northeast corner, Union Pacific tracks
1903-1906 - Mary Avenue, southeast corner with Elk Place now Cherokee, southeast corner with West Elk Place
1910 - Huron Avenue between West 47th and West 48th

ATHENS

I have found only a couple of brief mentions of Athens in my reading of Colorado history. Athens was a short-lived town just to the southwest of University Park. A plat was filed for Athens but apparently the area did not develop until much later, at which time it had been incorporated into the City and County of Denver.

The Athens community is now a mixed district of residences and small businesses. The commercial district is centered on South Pearl Street and includes a number of small restaurants and specialty stores. The location at 1540 South Pearl Street is occupied by one such small business. This is an older building that has been remodeled.

Locations 1896 - 1540 South Pearl Street

AURARIA

In the fall of 1858 prospectors began arriving in the area along Cherry Creek and the South Platte River. Several years prior, gold seekers on their way to California had found traces of gold in the area and were now returning in the hope that there was more to be found.

Several camps were scattered along the streams but by October the gold seekers were beginning to concentrate around the junction of Cherry Creek and the South Platte River. Led by William Green Russell and his brothers a meeting was held on October 30, 1858 that led to formation of the Auraria Town Company on November 1, 1858.

The new town was named for Auraria, Georgia, home town of the Russells. It is from the Latin word *aurum* meaning "gold" or "gold mine."

AURARIA – Continued

From almost the beginning Auraria was in competition with a settlement on the east side of Cherry Creek. First called St. Charles that settlement became Denver City and finally the Denver that would dominate the commerce of the region.

Reality began to set in and on April 5, 1860 a meeting was held on the bridge over Cherry Creek that connected Auraria and Denver City. The consolidation of the two communities was ratified and on April 8, 1860 the legislature of Jefferson Territory confirmed the union.

Auraria remains a community name within Denver and encompasses approximately the area bounded by West Colfax Avenue, Cherry Creek and the South Platte River. Today, in addition to some residences and small businesses, it is home to the Auraria Higher Education Center that includes branches of the University of Denver and Colorado University.

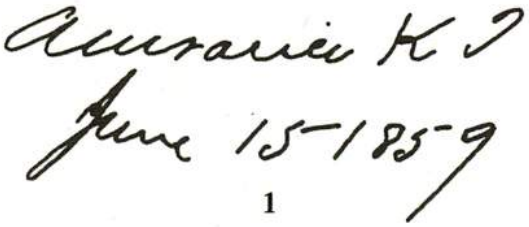

There are some older buildings in the 9th Avenue Park. These are about all that remains of residential Auraria. The earliest community was in the area now occupied by the Auraria campus of the universities.

BARNUM

Daniel Witter, an early settler, owned property southwest of Denver. He sold the land to the Villa Park Association. In 1880 P. T. Barnum, the famous circus owner, visited Denver. He thought that the area would make good winter quarters for his circus and he acquired the land.

Barnum never used the land for winter quarters but decided to subdivide it into building lots. Barnum transferred the property to his daughter, Mrs. Helen Buchtel. She was married to a prominent Denver physician and they constructed St. Francis Sanitarium on the land. The town site was platted and was incorporated on August 27, 1887. The streets were named by Barnum after his associates, relatives and people and places he admired.

Transportation and adequate water were problems for the town and slowed its development.

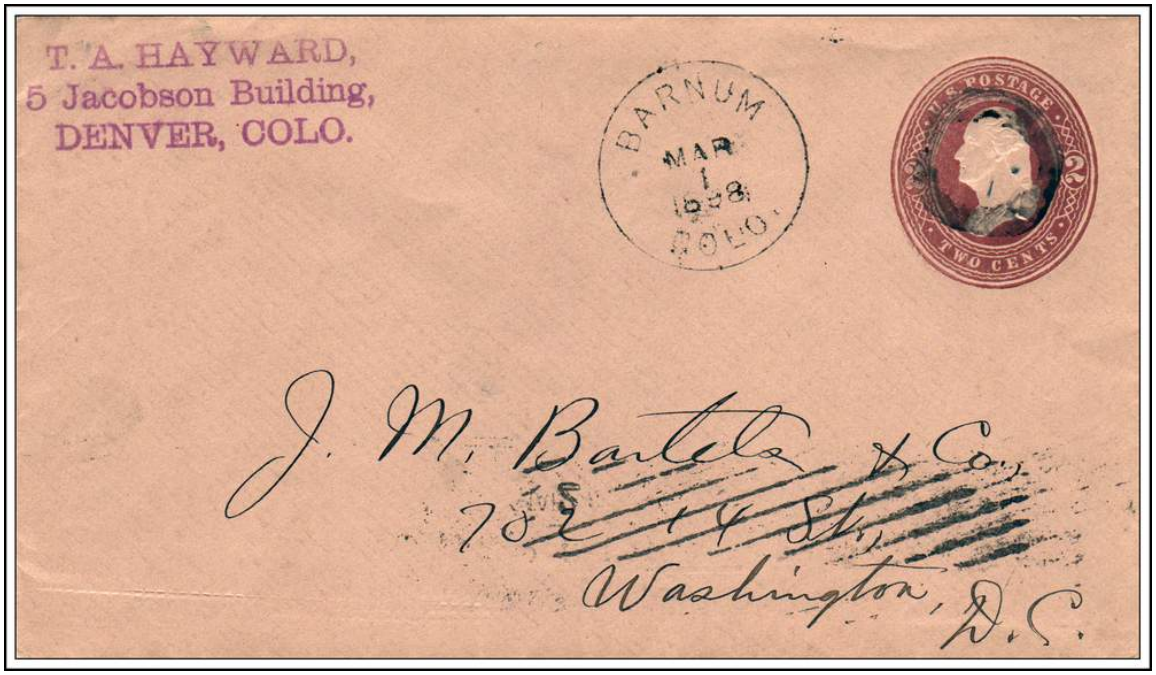

On September 3, 1896 Barnum became part of Denver but the residents are still proud to call their community by its original name of Barnum.

BARNUM – Continued

The Barnum community is bounded by Federal Boulevard, West Alameda Avenue, Lowell Boulevard and West 8th Avenue.

The Barnum neighborhood is largely residential in nature. On the north side of West 1st Avenue, between 3219 and 3225 West 1st, there is (2003) a recently renovated two-story brick building that may have been a location of the Barnum Post Office.

BERKELEY

John Brisben Walker and Doctor William Bell, a British investor, operated "Berkeley Farm" to the northwest of Denver. Alfalfa was their principal crop. The farm may have been named for Walker's former home of Berkeley Springs, Virginia.

There were three Communities interconnected in this area: Mountainview, North Denver and Berkeley. And, there seems to have been two with the name Berkeley"

The first Berkeley was in approximately the same location as Mountainview. A plat was filed by Ellis and John McDonough on December 26, 1888. That plat was eventually vacated and a new Berkeley plat was filed in 1894 by A. C. Fisk. The latter plat was for an area just north of Inspiration Point. Berkeley was incorporated April 13, 1898

On June 25, 1892 the Berkeley Area was originally incorporated as North Denver.

The 1894 Berkeley included an area north of West 38th Avenue and west of Tennyson Street, north to West 46th Avenue, east to Zuni Street, north to West 50th Avenue west to Sheridan Boulevard and back south to West 38th Avenue. The area was annexed to Denver on December 1, 1902 when the City and County of Denver were created.

BERKELEY – Continued

The area defined by the Post Office Department Geographic Site Location Report is now largely occupied by the Willis Case Municipal Golf Course, Interstate 70 and Berkeley Park. To the south of West 46th Avenue the area is residential. On the southwest corner of Yates and west 45th Avenue is a two-story brick building that was once a store and perhaps the Berkley Post Office.

Berkeley Lake and Berkeley Park perpetuate the name of Berkeley.

The Berkley Post Office was authorized in 1890, but in 1896 it was moved to Alcott.

The 1893 location of the Berkley Post Office is on the northeast corner of West 38th Avenue and Utica Streets. In 2003 this was the location of Merkels automotive.

Locations
1891 - East side of Maple Avenue between Avenues D and E
Now East side of Yates between West 44th and West 45th
1893 - Prospect Avenue, northeast corner of Water Street

CHERRY CREEK

There was not a Cherry Creek Post Office in the immediate area of Denver. However, there are letters known that bear dates and return addresses of Cherry Creek. These letters were written before there was any authorized post office in the region and were hand carried to post offices outside the new mining area.

There was a Cherry Creek Post Office in Arapahoe County (July 28, 1869 to circa 1886).

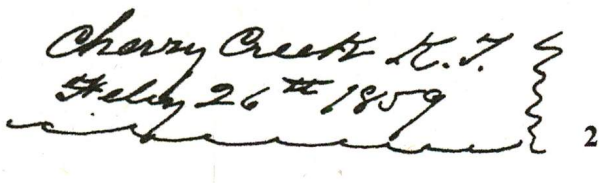

Chronology of the Post Office

Not an official post office

CORAVILLE

Coraville still remains a bit of a mystery. Prior to 1887 there was not a place in Colorado that answered to that name. From August 1887 to April 1888 there was supposedly a Coraville Post Office in Boulder County. However, that office had no relationship to the Coraville of 1859.

On March 22, 1859 a Coraville Post Office was authorized and Mathais Snyder, Jr., formerly of Virginia, was appointed postmaster. All the evidence points to Coraville being in the offices of the Leavenworth and Pikes Peak Express Company in Denver City.

Covers from Coraville are known with three dates, June 8, June 17 and June 22, 1859. Those dates would fit with the early eastbound trips of the Leavenworth and Pikes Peak Express. This company became Jones and Russells Pike Peak Express Company, and finally the Central Overland, California, and Pikes Peak Express Company.

The Coraville Post Office existed for only three months before it closed, yielding responsibility for the United States mail to the Auraria Post Office.

If the records are correct, the first office of the Express Company was in a building on Larimer Street, between Cherry Creek and E Street (now 14th Street.

Chronology of the Post Office

	No document filed under the Denver or Arapahoe County Geographic Site Location Reports

DENVER

On September 24, 1858 six men from the Lawrence party that had settled at Montana City moved down Cherry Creek and established the St. Charles Association on the east side of the creek. With winter approaching the men decided to return east, planning to promote their new town and to return in the spring.

General William Larimer, heading the Leavenworth-LeCompton party saw the potential of the site on the east bank of Cherry Creek and, in the absence of the St. Charles group, his party moved on to the St. Charles site. On November 22, 1858 Denver City was on the map.

Denver was named for James W. Denver, Territorial Governor of Kansas who had resigned, his post five weeks prior to the formation of the Denver Town Company.

On April 5, 1860 a meeting was held on the bridge over Cherry Creek that connected Auraria and Denver City. The consolidation of the two communities was ratified and on April 8, 1860 the legislature of Jefferson Territory agreed to the union.

Denver City became the county seat of Arapahoe County, within the Territory of Jefferson.

Denver City grew rapidly and on February 13, 1866 the post office dropped the City and became simply Denver.

In 1867 the Territorial Capitol was moved from Golden to Denver. Denver soon became a center of commerce as wagon roads and stage lines from the east converged on the city before spreading out into the mountains to the west. In 1869 a railroad connection was established from Denver to Cheyenne. Soon thereafter the Denver Pacific Railroad entered from the east. General William Palmer founded the Denver and Rio Grande Railroad, which began building south towards New Mexico. With the arrival of the Santa Fe, The Union Pacific, and the Burlington Railroads Denver became a major rail center. There were several other railroads that originated from Denver, but either failed to last or were incorporated into one of the major rail systems.

Initially the economy of Denver was tied to mining, but as time passed agriculture, manufacturing, petroleum and general commerce all came to play major roles in the development of Denver.

Denver would style itself “The Queen City of the Plains,” a title that still appears in promotional literature.

A major milestone in the history of Denver occurred in 1902. The expanding metropolitan Denver was a patchwork quilt of small, independent communities. To improve services and eliminate jurisdictional conflicts the Colorado Legislature authorized the creation of The City and County of Denver. Argo, Berkeley, Elyria, Globeville, Montclair and Val Verde joined with Denver to create a consolidated area of fifty-nine and one quarter square miles. Several other unincorporated communities were also included in the new city.

DENVER – Continued

Today Denver is still a growing city that attracts new residents from throughout the United States. The history of Denver has been the subject of many books. If you wish greater details about the history of Denver, the bibliography at the end of this unit will point you to some of these references.

For many years the Denver Post Office was located in the massive Federal Style building in the block bounded by 18th Street, Champa Street, 19th Street and Stout Street. The need for more space resulted in the Denver Post Office moving to a large complex in northeast Denver. A station at 951 20th Street replaced the Main Post Office and now serves the central business district of Denver. Mail processing and distribution is done at the new General Mail Facility on 7500 East 53rd Place. The old post office building has been converted to house Federal Courts.

Locations Early - northeast corner of Blake and 16th
1882 - 16th and Curtis
1888 - 15th Street, northwest corner Lawrence
1890 - Champa between 17th and 18th [Gettysburg Building]
1896-1917 - Corner of 16th Streets

Latitude = 39:44:21 North Longitude = 104:59:03 West

PLEASE REFER TO PART 2 OF THIS CHAPTER FOR THE COMPREHENSIVE LISTINGS AND ILLUSTRATIONS OF THE POSTAL MARKINGS FROM DENVER

DENVER CITY

In the early fall of 1858, on the west side of Cherry Creek, at its junction with the South Platte River, was the settlement called Auraria

On September 24, 1858 six men from the Lawrence party, that had settled at Montana City, moved down Cherry Creek and established the St. Charles Association on the east side. Included were John A. Churchill, Frank M. Cobb, Adnah French, William Hartley, Charles Nichols and William T. Smith. T. C. Dickson joined them and they also added "Uncle John" Smith and William McGaa.

Unfortunately the St. Charles Association, with winter approaching decided to return east, planning to promote their new town and to come back in the spring. General William Larimer, heading the Leavenworth-LeCompton party, was in Auraria. Larimer saw the potential of the site on the east bank of Cherry Creek and, in the absence of the St. Charles group, Larimer and his party moved on to the St. Charles site. On November 22, 1858 Denver City was on the map.

When the St. Charles party returned in the spring they found their townsite occupied. The matter was resolved by absorbing the St. Charles folks into the Denver Town Company and giving each one of them a share in the combined company.

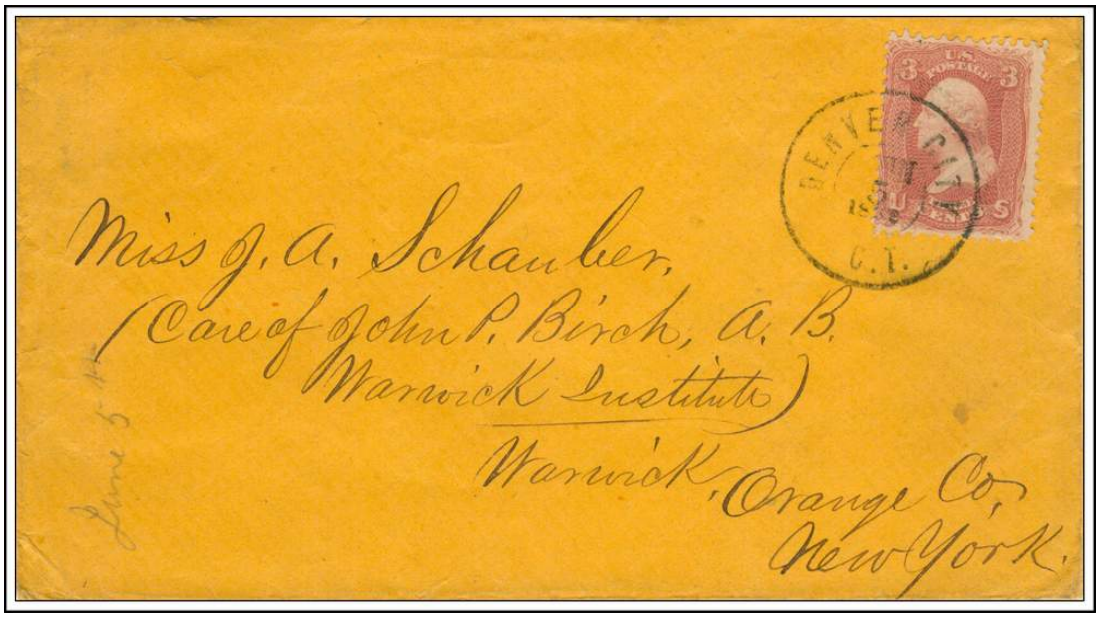

DENVER CITY

The new settlements were on the edge of survival as the promised gold had not been found in Cherry Creek or the South Platte. In the spring of 1859 major discoveries were made in the mountains at what would become Idaho Springs and Mountain City. With that impetus Auraria and Denver City commenced to grow.

For about a year Auraria was the dominant community, but Denver City soon became the preferred rest and supply point for the incoming gold seekers.

Reality began to set in and on April 5, 1860 a meeting was held on the bridge over Cherry Creek that connected Auraria and Denver City. The consolidation of the two communities was ratified and on April 8, 1860 the legislature of Jefferson Territory confirmed the union.

The Territorial Legislature of Jefferson Territory named Denver City the county seat of Arapahoe County, an unwieldy jurisdiction that at first stretched six hundred miles east from the Continental Divide, most of it uninhabited.

DENVER CITY / C.T. June 5, 1862

With the election of John C. Moore as Mayor, a city government was organized on December 19, 1859. On November 7, 1861 Denver City was re-incorporated under the laws of the first Territorial Legislature of Colorado.

Denver City grew rapidly and on February 13, 1866 the post office dropped the City and became simply Denver. Apparently the citizens felt their community had grown sufficiently that they no longer needed to tout themselves as a city.

During the time period of Denver City the post office was on Blake Street in the block southwest of 16th Avenue.

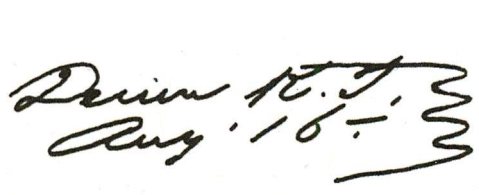

Chronology of the Post Office

DENVER MILLS

In 1892 the name of the Sheffield Post Office was changed to Denver Mills. The 1891 Post Office Department Geographical Site Location Report for Sheffield was altered to show the name change to Denver Mills, thus it is clear that they were in the same place.

I have recorded only two mentions of Denver Mills from the Colorado history that I have read. One reference places Denver Mills at Milepost 5.10 of the Denver South Park and Pacific Railroad.

The second reference acknowledged that Denver Mills began as the Sheffield Post Office in 1891 and that in 1892 the name was changed to Denver Mills. It then goes on to state that the town of Sheffield was located "east of Elyria." Another reference to Sheffield claims that it was platted on September 26, 1926.

This 1926 Sheffield must be a different development than the original as Elyria is several miles north of the location of Denver Mills / Sheffield.

The area that was once known as Denver Mills (formerly Sheffield), located south of West Mississippi Avenue and to the east of Lipan Street now consists of warehouses and small businesses. There is some residential housing in the western portion of the area described by the Post Office Department Geographical Site Location Report.

Locations 1896 - West side of Manchester Avenue between Gray and Mecia
Now West side of Kalamth between West Louisiana and West Arizona
1901 - East side of Epperson between West Louisiana and West Arkansas
Epperson is now Jason
1903-1904 - On Manchester [Kalamath]
1906 - Epperson between Mecia and Gray

ELYRIA

In 1895 the name of the Lyman Post Office was changed to Elyria. Elyria had been one of the proposed names when the post office application was submitted in 1885.

The location was originally named Sand Creek Junction and is shown as such on maps of the period.

Elyria was located near both the Burlington and the Union Pacific Railroads, between 48th and 52nd Avenues, from Steele Street to Colorado Boulevard. The area developed into a mixed residential and commercial community with some manufacturing.

Elyria was incorporated August 2, 1890 and on December 1, 1902 Elyria was one of the communities that were merged into the City and County of Denver.

ELYRIA – Continued

Similar to Globeville, the original area known as Elyria is bisected by Interstate 70. North of Interstate 70 there is a commercial district along Brighton Boulevard and East 47th Avenue. The remainder of that area is residential housing. South of the interstate rail yards dominate.

The southwest corner of the intersection of Baldwin Court and East 47th Avenue is one of the possible locations for the Elyria Post Office. In 2003 there was a single-story business building, painted green, on that corner.

Locations 1898 - 47 Nelson [now Williams]
1903 - 32 Fisk Avenue [now 47th Avenue]

GLOBEVILLE

In 1889 the Globe Smelting Company purchased land that it platted as a town to house workers at the smelter. Globeville was incorporated July 9, 1891 and on December 1, 1902 became part of the City and County of Denver.

In addition to the smelter workers, Globeville was home to a group of Evangelical German families from Kansas.

The community is now a mixed industrial and residential district.

Globeville was bounded by 43rd Avenue north to 52nd Avenue and from the South Platte River east to Broadway.

The area that was once Globeville is now bisected by Interstate 70. North of the interstate it is a working class residential neighborhood. South of the interstate it is largely commercial.

A possible location of the Globeville Post Office is on the southwest corner of the intersection of East 45th Avenue and Logan Street. There is a low complex of brick buildings on that corner.

Locations 1896 - North Logan Avenue, southwest corner of 2nd

HARMAN

On March 2, 1882 Judge Edwin P. Harman platted Harman's Subdivision on a 320 acre farm on the north bank of Cherry Creek. The town was incorporated November 19, 1886. On February 20, 1895 Harman was annexed by the City of Denver.

Edwin P. Harmon was a lawyer from Mississippi who came to Denver following the Civil War. With his brother Louis, they homesteaded south of the city.

Harmon developed as a residential section with a small business district. Today what was Harmon remains as a mixed residential and commercial area just south of University Boulevard on the north edge of the Cherry Creek Shopping Center.

The Cherry Hills Shopping Center now occupies most of what was the Harmon community. There is additional commercial activity mixed with residences. The building, on the southeast corner of East 3rd Avenue and Detroit Street was once the location of the Harmon Post Office.

Locations
1893 - Shumate, southwest corner 2nd Avenue
1898 - Detroit , southeast corner 3rd Avenue
1901 - East 3rd Avenue, southeast corner of Detroit
1903 - 2805 East 3rd Avenue

HIGHLANDS

The early history of this post office is discussed under Highlandtown.

The Highlands community was bounded on the north by West 38th Avenue, on the east by Zuni Street, on the south by West Colfax Avenue and on the west by Sheridan Boulevard.

Today the area is largely residential but it does include commercial districts along West Colfax Avenue and Sheridan Avenue.

The Highlands independent post office was closed in 1897 and supplanted by a station of Denver.

The 1888 location was on the southeast corner of River Drive and Clay Street, now occupied by a small business. The 1891 location was likely in the long, low, gray building on the southwest corner of West 26th Avenue and Grove Street.

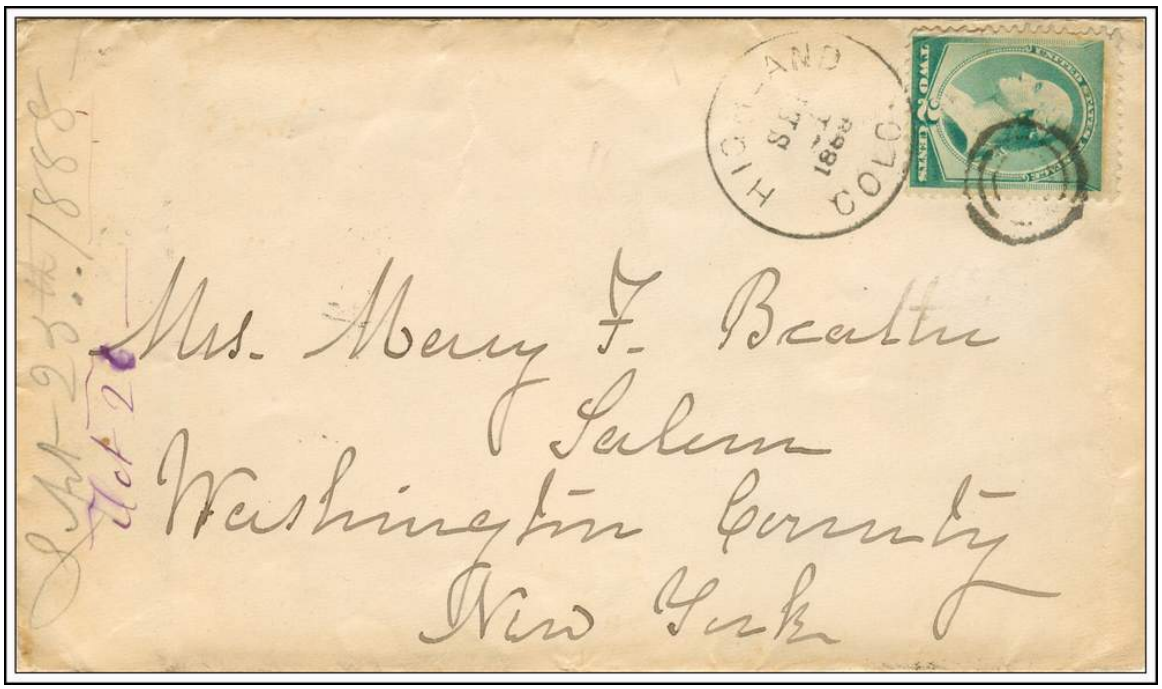

Locations 1888 - Front view - Crescent, southeast corner River Drive
1889 - 202 Crescent
1891 - 626 8th Street [now Grove Street]

HIGHLANDS – Continued

HIGHLANDTOWN

At the same time as Auraria and Denver City were beginning to develop a third settlement, named Highland arose on the west bank of the South Platte River. William H. Larimer, Jr. and D. C. Collier are credited with staking out the town.

The settlement took the name of Highland, from the gradual and steady rise of the land from the banks of the river.

In 1871 Horatio B. Pearce, a temperance advocate, platted the town of Highlands on his ranch. Highland has been mentioned in a number of Colorado histories, but there is considerable confusion as to when the community was incorporated and when it was annexed to Denver.

One reference states that Mr. Pearce petitioned the Territorial Legislature to incorporate the town in 1875. That date has been used by other writers. Other sources state that Highland was incorporated on November 15, 1885. Next in question is the date of annexation to Denver. Some sources state it was done in August 1886, while others sources claim it did not take place until 1888 or even 1896.

Even though its location was advantageous, Highland was slow to develop; the lack of bridges across the South Platte River being one reason. Eventually the community did grow and was considered one of the premier residential districts of the area.

Not wanting to be part of what they considered a corrupt community, Highland residents resisted efforts to consolidate with Denver. Finally, economic reality forced Highland to vote for annexation to Denver.

This community has had several versions of its name. First was Highland. In 1883 when a post office was approved it went by the name of Highlandtown. However, that was soon shortened to Highlands. The latter name seems to have been the most popular with the residents.

The area of Highlandtown is now largely residential but most of the buildings appear to postdate the early 1880's post office. The most attractive of the older buildings are on the north side of West 28th Avenue, west of Eliot Street.

LORETTO

Loretto was the location of the Loretto Heights College a private Catholic institution.

The college is located just north of the town of Sheridan. There was no town or community with the name of Loretto - just the college.

For many years the post office was located on the grounds of the college. Nuns working at the college served as postmistresses during the years that it was an independent post office.

In 1966 the Loretto Post Office was converted to a station of Denver and subsequently was located across Federal Boulevard from the college.

In 2003 the Loretto Contract Post Office had returned to the college administration building.

LORETTO / COLO. December 4, 1898

LYMAN

Lyman is described as a railroad post office along the Burlington Railroad; however the Post Office Department Geographic Site Location Report references the location to the Union Pacific Railroad. Maps of the period 1884-1902 show Lyman in the same location as Sand Creek Junction.

Lyman was named for Joseph C. Lyman, the first postmaster.

The Site Location Report indicates that the Post Office Department was given a choice of names - Elyria or Lyman. They chose Lyman. In 1895 the name of the post office was changed to Elyria.

The area developed as a mixed residential and commercial community. In 1902 Lyman, now Elyria, was incorporated into the City and County of Denver.

Similar to Globeville, the original area known as Lyman is bisected by Interstate 70. North of Interstate 70, there is a commercial district along Brighton Boulevard and East 47th Avenue. The remainder of that area is residential housing. Railyards dominate the area south of the interstate.

The portion of High Street, in the block south of East 47th Avenue is typical of the area.

Location 1889 - Estes Street [now Race Street]

Chronology of the Post Office

MONTANA

In September 1858 a group of prospectors from Lawrence, Kansas led by John Easter, founded Montana City on the east bank of Cherry Creek five miles south of where that stream joined with the South Platte River. As many as twenty cabins were erected to provide winter quarters for the party. Montana is Spanish and Latin meaning mountainous.

The Montana Town Company was organized with Josiah Hinman as president and W. J. Boyer as secretary. The town with blocks, lots, streets and alleys was staked by William Hartley, a civil engineer. The townsite was bounded by today's West Iliff, South Delaware, West Evans and the South Platte River.

Montana City lasted less than a year before it was essentially abandoned. There are reports that some or all of the buildings were moved to Denver City. A portion of the Lawrence party is credited with establishing Denver City.

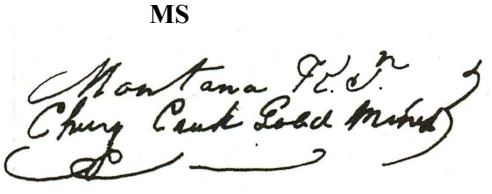

The site of the short-lived settlement of Montana is commemorated by a log cabin and transplanted mine headframe in the north end of Grant-Frontier Park, accessed from West Evans Avenue via Galapagos Street. Except for the park, this area along the South Platte River is largely undeveloped. The area west of the river is the property of the Englewood Sanitation and Water System.

Chronology of the Post Office

	No document filed under the Denver or Arapahoe County Geographic Site Location Reports
	West Evans Avenue, South Galapagos Street, West Harvard Avenue, South Platte River, now within Frontier Park

MONTCLAIR

Mathias Cochrane established Montclair in 1885, it was conceived as a Utopian suburb. The town was incorporated in 1888. It was touted as living space for health and moral pleasure seekers.

The name Montclair was inspired by the magnificent mountain view from the location.

Baron Walter von Richthofen was the most famous inhabitant of Montclair. In Montclair he built a castle-like home for his wife.

Montclair was incorporated October 5, 1888. When the City and County of Denver was created on December 1, 1902, Montclair was one of the suburban communities annexed by Denver and included in the new county.

At the turn of the century (1900) Montclair was that portion of Denver south of Montview Boulevard and east of Colorado Boulevard. Today it is considered to be from Monaco Parkway to Quebec Street between East Colfax Avenue and East 6th Avenue. It is bordered on the east by the city of Aurora.

The 1910 address of the Montclair Post Office at 1438 Oneida Street is now the location of an upholstery shop. It is next door to the Denver Fire Department Station Number 14, built in 1937.

Locations 1900 - East side Geneva Avenue between 14th and Colfax Avenue
1901-1904 - East side Geneva Avenue between East 14th Avenue and East Colfax Avenue [Geneva Avenue is now Oneida Avenue]
1910 - 1438 Oneida

OAKES

On June 12, 1890 J. L. Oakes filed a plat for the town of Oakesdale. Oakesdale or Oakes, was actually the northern portion of a larger community called Sullivan, which had been established in the fall of 1889.

Oakes was named for J. L. Oakes and Sullivan was named for Dennis Sullivan. The railroad built a coal bin, cattle chute, station, section house, bunkhouse and handcar shed. The station was called Sullivan, but the post office was named Oakes.

Oakes was described as a growing dairy and poultry town in Arapahoe County on the Colorado and Southern Railway - population 150.

Oakes was included in the City and County of Denver when it was created in 1902.

This area has recently been redeveloped with several large apartment buildings. There were still (2003) a couple of older buildings on the east side of Syracuse Way, just south of East Harvard Avenue.

Location Site was on present Syracuse Way

Chronology of the Post Office

May 19 1890 ---	**NW/4 Sec 33 T4S R67W 1/4 mile west of Cherry Creek**
	On east side of track, 160 feet, now High Line Station - proposed Oakesdale

OVERLAND

The Overland Station of the Denver, South Park and Pacific Railroad was at milepost 6.00, south of Denver. A community developed around the station. Adjacent to the community, Overland Park began as a race track, exhibition and entertainment complex. It changed with the times, from a horse track to an auto race track. There was a clubhouse with supporting facilities.

By the early 1920's Overland Park had lost its luster and was closed. The City of Denver took over the property with the intent of converting it to a facility for auto tourists, a pastime that was rapidly gaining popularity. The clubhouse was remodeled into an assembly room, dining hall, laundry, soda fountain and grocery. There was a filling station at the entrance to the park. Overland Park, dedicated on August 18, 1922, had become a miniature city.

For a few years the operation was a success, but changing travel habits and the Depression years turned Overland Park into a losing proposition.

In 1930 the clubhouse, camp and race track were razed and replaced by a nine-hole golf course. A one-story clubhouse for the golf course was built on the foundations of the original clubhouse. In 1957 the golf course was expanded to eighteen holes and is still in operation.

The locations of the Overland Park Post Office that were along West Evans Avenue, are now in a commercial district that includes some auto sales lots. The post office was at locations on both the southeast and southwest corners of West Evans Avenue and Lipan Street.

The Overland Municipal Golf Course, north of West Evans Avenue, is open to the public and there is a restaurant in the clubhouse.

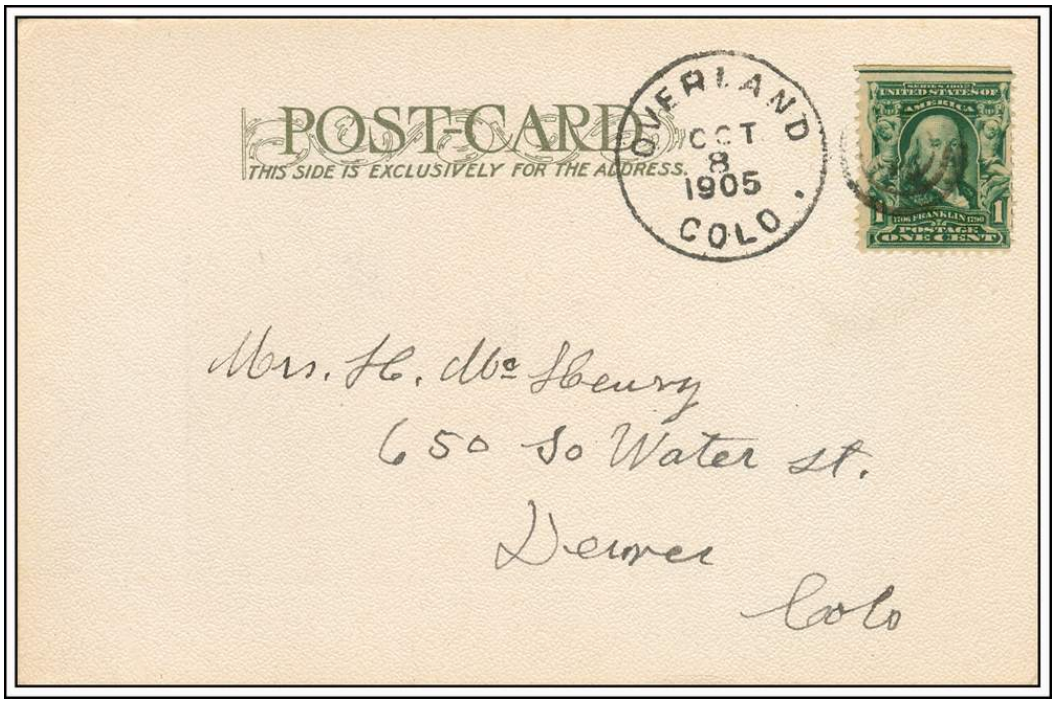

Locations
1893 - Myrtle Avenue, southwest corner of South 10th Street
Now West Evans southwest corner of Lipan Street
1900 - West Evans between South 9th Street and South 10th Street

OVERLAND – Continued

SHEFFIELD

I have found almost no information about Sheffield. It is known that the name of the Sheffield Post Office was changed to Denver Mills. The Post Office Department Geographical Site Location Reports give the same location for both offices. There is only one report for Sheffield, which was altered to be the initial report for Denver Mills.

Assuming there was no change in location, then Sheffield was at milepost 5.10 of the Denver, South Park and Pacific Railway, 100 feet east of the tracks. The railroad station was named Manchester.

I have no information as to the source of the name Sheffield.

There is an historical mention of Sheffield having been platted on September 26, 1926. I do not believe that was the Sheffield on the South Park Railway. It would be very odd to resurrect an old name after more than thirty years and it is noted that the 1926 Sheffield was "east of Elyria." Elyria was several miles north and east of the 1891 Sheffield.

The area that was once known as Sheffield (later Denver Mills) is located south of West Mississippi Avenue and to the east of Lipan Street and now consists of warehouses and small businesses. There is some residential housing in the western portion of the area described by the Post Office Department Geographical Site Location Report.

Chronology of the Post Office

NO POSTMARKS HAVE BEEN REPORTED FROM SHEFFIELD

SOUTH DENVER

South Denver was more than a description. It was an organized and incorporated town. William Hodgson established South Denver in 1874. On August 14, 1886 South Denver was incorporated comprising an area bordered by Sixth Avenue and Cherry Creek on the north, Evans Avenue on the South, University Boulevard on the East and Jason Street (Santa Fe drive) or the South Platte River on the west,

On February 7, 1894 Denver assumed the $263,000 bonded indebtedness of South Denver and took over its fire department and deteriorating water works. With that action, South Denver was officially annexed by Denver.

SOUTH DENVER – Continued

Phil Goodstein in *South Denver Saga* describes South Denver thusly: "Over the years South Denver has managed to hold its own as an area offering a wide variety of residential, business and entertainment experiences. It has been the site of Denver's main university, an industrial district, a row of thriving retail shops, a couple of race tracks, a location of major Ku Klux Klan activity, a supposed slum, a center of sex joints, and one of the most desirable residential sections of the Queen City of the Mountains and Plains."

Following the closure of the South Denver Independent Post Office the area was served by Denver's Station A. In 1899 the Station was renamed South Denver and there has been a South Denver Station ever since.

Locations 1893 - 436 South Broadway - Parking lot on north of the Little Shanghai Restaurant [2003]
1900 - 11 Broadway - A large shopping mall [2003]
1903 - 266 South Broadway -A parking lot, car rental and car wash [2003]

STOCKYARDS

Stockyards was not a community per se. It was the area encompassing the stockyards on the northeast edge of Denver.

The post office was needed to provide mail services to the buyers and sellers of the livestock that were passing through the stockyards.

Stockyards was an independent post office from 1898 to 1904 when it was converted to a station of Denver. Status as a station was more appropriate for the Stockyards than was an independent operation.

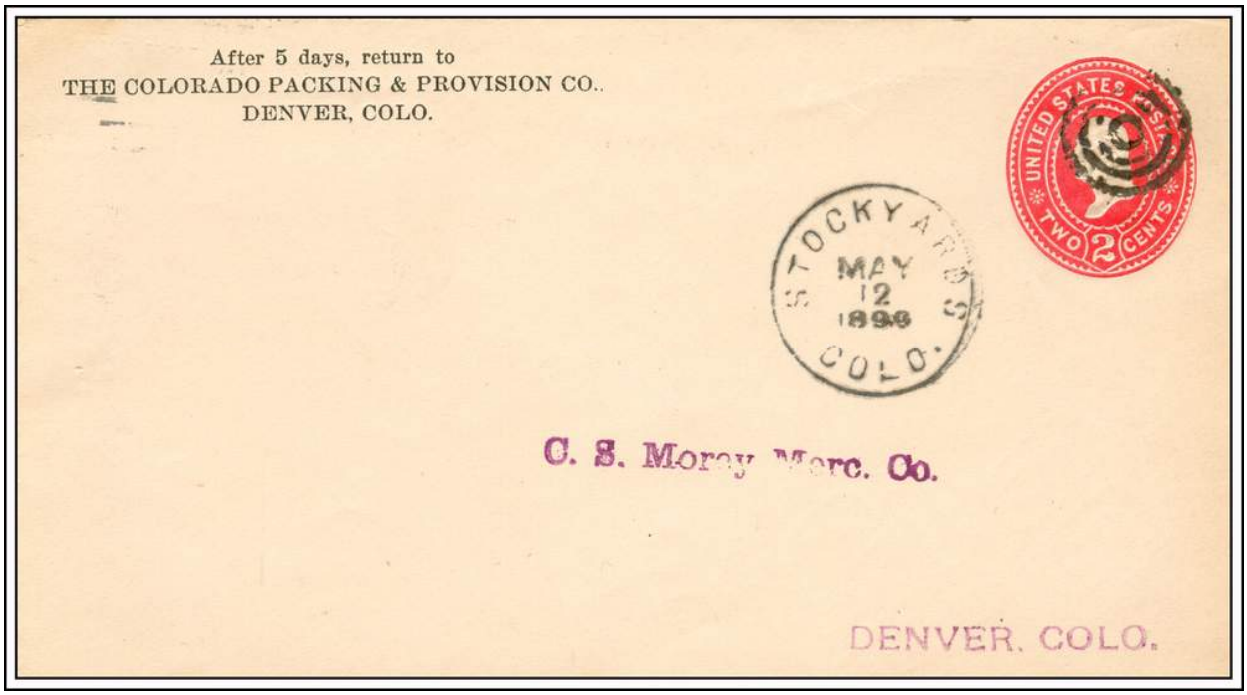

The post office was in the main administration building for the stockyards.

STOCKYARDS – Continued

The large, four-story Stockyards administration building still stands. In 2003 it was being extensively renovated. Access to the site is controlled, but a good view can be had from the corner of East 48th Avenue and Lafayette Street.

Chronology of the Post Office

Mar 15 1898 ---	**NW/4 NE/4 NW/4 Sec 23 T3S R68W 1/4 mile east of the Platte river**

UNIVERSITY PARK

University Park was platted in 1886 and encompassed a tract of land adjacent to the University of Denver. In 1890 Sarah Evans and Watson Wesley built a store on the northwest corner of Evans and Milwaukee. The general store was also the location of the University Park Post Office with Sarah Evans as the initial postmaster.

The University Park Post Office was briefly closed during 1904, but reopened and operated to 1915 when it was converted to a station of Denver.

University Park is now an area of mixed residential and commercial activity, largely supporting the nearby campus of Denver University. A residence now occupies the 1896-1901 location of the University Park Post Office on the northeast corner of East Evans Avenue and Clayton Street. The 1906-1915 location, on Milwaukee Street, just north of East Evans Avenue is a parking lot for an apartment complex

Location 1896-1901 - South Detroit, northeast corner of East Evans Avenue

VILLA PARK / VILLAPARK

Villa Park was a residential community developed in 1889 near Federal Boulevard and West Colfax Avenue.

The post office name was originally two words - Villa Park. In 1895 the spelling was changed to one word - Villapark. This was another of the name changes instituted by the Post Office Department to simplify post office names around the country.

Villa Park was in the area west of Federal Boulevard, between West 13th Avenue and West 8th Avenue, extending westward to about Lowell Boulevard.

It is curious that the street locations for the Villa Park Post Office are east of the location of the Villa Park Subdivision. All three are on old Colfax Avenue, south of the Colfax Avenue overpass and south of INVESCO Field. One of the locations may have been where there is now a "garden" for a restaurant and bar.

Locations 1891 - 23 Golden Avenue [now 23 West Colfax Avenue]
1893 - 401 Golden Avenue [now 401 West Colfax Avenue]
1896-1897 - 121 Golden Avenue [121 West Colfax Avenue]

PART 2

POSTAL MARKINGS OF DENVER AND ITS STATIONS

There are numerous postal markings that have been used by the Denver Post Office and by its various stations and branches. The sheer number of these markings make a normal chronological listing cumbersome and difficult to use. Therefore I have chosen to treat the markings from Denver in a manner different from the rest of the postmark listings in *The Colorado Postal Encyclopedia.*

Postal markings from the independent post offices in that area now in the City and County of Denver are treated in the normal manner and included, in this chapter, with each post office as it is discussed.

A further complication is that some of the branches and stations of Denver, such as Lakewood in Jefferson County, are not within the boundaries of the City and County of Denver. Such affiliates are included with Denver.

Several years back, I began publishing listings of the postmarks of the City and County of Denver. That effort was not finished and since then many more markings came to my attention. Therefore, the numbering scheme that I used at that time has been abandoned in favor of a new system.

The postmarks of Denver are listed according to the following outline.

1.0 Basic Postal Markings used by the Denver Post Office Page 47
1. 1 Nineteenth Century Handstamped Postmarks Page 47

1. BASIC POSTAL MARKINGS USED BY THE DENVER POST OFFICE

1.1 NINETEENTH CENTURY HANDSTAMPS

The following handstamped postal markings were used by the Denver Post Office during the nineteenth century. Subsequent groups will describe the Duplex and Machine postmarks that were also used in Denver during the nineteenth century.

It should be noted that many of these devices were individually hand cut from steel. It is likely that more than one device of a given design was prepared. It is likely that there are minute, but recognizable variations among such multiples. With the exception of the Denver, Colo. handstamps of the late territorial and early statehood periods I have not made an attempt to differentiate such variations. I leave that task to a future specialist.

1.2 DUPLEX POSTMARKS

This group of postal markings includes those devices that can be positively identified as a duplex marking - the postmark and the killer attached. It does seem likely that some of the previously discussed handstamps may have been intended to be used as a duplex marking, but were seldom if ever used as intended. In addition, on occasion one of the duplex markings may have been used without its attached killer.

The Duplex killers used by Denver all included a number within the killer. I have used that number as a subscript to the basic type numbers. In some instances I assume that additional numbers were used, but I have not seen and recorded examples.

1.4 FOUR-BAR POSTMARKS

Four Bar postmarks were not in common use by the Denver Post Office. Such devices were available and were used by clerks to postmark mail at their counters. Prior to the introduction of pictorial postmarks, some of the devices were used at special events, such as the Rocky Mountain Stamp Show. Those markings are also listed under the respective special stations.

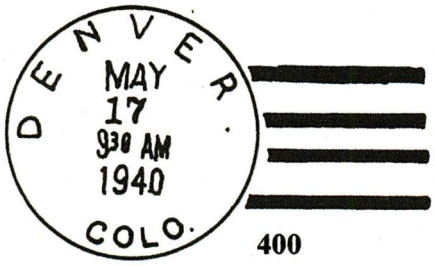

DENVER / COLO. February 26, 1950
From 1950 through 1958, generic Denver markings were used at the Rocky Mountain Stamp Show.

1.5 MACHINE POSTMARKS

The machine postmarks used by the Denver Post Office are an extensive and complex group. I have segregated them into several sub-groups based on general formats. The associated slogan postmarks are listed as a separate section.

The initial group includes late nineteenth and early twentieth century machines that might be classed as experimental. The first major group of the twentieth century were simple Denver, Colo. postmarks. Subsequent groups included a die number in several different forms. In the second half of the twentieth century the establishment of Zip codes created additional styles.

The purpose of the die numbers was, when a problem was observed, to provide the post office with an identifier as to which of the several machines in use was at fault.

Late in the twentieth century the Post Office epartment experimented with computer generated "ink jet" postmarks. Beginning in late 2004 a new style of computer generated spray marking was introduced. These have become standard but occasionally, probably when there is a larger than usual volume of mail, one of the older machines is used.

1.5 MACHINE POSTMARKS – Continued

DENVER, COLO. with Die number and letter near the left end of a 7 wavy line killer. This group of machine postmarks was in use for about fifteen years. It seems likely that more than one machine and multiple dies were prepared and used during that time. It is possible to visualize minor variances in the dials of this group of postmarks but it is not easy to separate them as significant varieties and not as happenstance during impression of the postmarks. For that reason, I have not attempted to define subtypes group beyond the killer numbers and letters

Four letters were used in the killer bars. Initially these had significance designating the origin of the mail. This distinction did not survive and the killer dies seem to have been used without the distinctions.

C Collection Boxes
D Distributing offices
R Receiving centers
T Transit

With this and subsequent groups that include a die number it is to be expected that additional die numbers exist and should be reported for the records.

DENVER, COLO. MAY 11, 1914

DENVER / COLO. Principal feature is a dial number at the left side of the CDS. These numbers vary in the size of the number, the position and the presence or absence of serifs on the numbers. Other variations are in the lettering and diameter of the dial. This group is "typed" first by the dial number and second by the variations for each number.

DENVER. COLO. : The principal characteristic of this group is a combination die number and letter"that follow the state on the right side of the dial. There are three sub-groups: type 561 with straight line killers, type 563 with wavy line killers and type 565 with "CO" instead of "COLO." type 567 is a variation of type 565 but with no die designation.

1.6 MACHINE POSTMARKS WITH SLOGAN KILLERS

DENVER, COLO. / 1917 **April 26, 1917**

The first slogan postmarks used by the Denver Post Office appeared in 1915. Between then and the end of the twentieth century there were a large number of different slogans. Some of these slogans were used only once, for a few days. Others had extended periods of use, or over a period of years were brought back in use for annual campaigns or commemorations.

The slogan postmarks were used with a variety of dials and therefore are known with various dial number designations. I am certain that not all of the dial and slogan combinations are here recorded. I would appreciate photocopies of additional combinations from your collections.

For the slogan killers that were used over a period of years it should be expected that there may be slight variations in the size of the box that contains the slogan. Unless it is a major difference, such variations are not reported here.

In some instances, where there are multiple dials in use with a given slogan, I have chosen to illustrate the slogan with one dial and then show only the other dials that I have observed used with that slogan. Yes, you may find this approach a bit inconsistent in the listing, but that is my choice and my idea of artistic license.

1.8 INK JET STRAIGHT LINE POSTMARKS

During the 1990's this group of postmarks were computer generated and applied by dot matrix style printer. The initial intent was that they would be applied to mail franked by postage meters. The purpose being to show the actual date the mail was received by the post office. However, the markings were often applied to mail franked with postage stamps.

The use was gradually discontinued.

For illustration purposes, this group of postmarks presents a problem. In collecting and recording them, I have observed many variations.

The most obvious are variations in the wording, in content, or a number indicating a specific machine. Also, some of the markings include GMF (General Mail Facility) OR P&DC (Processing & Distribution Center). For simplicity they are included in this section.

Less obvious, are variations in the size of the lettering.

Tracing the markings is difficult as they are often smeared or somewhat illegible.

Therefore, in this section, I have chosen to list the markings as I recorded them. However, at the end of the section to illustrate only typical examples of the markings.

Confirmed types of postal markings

1.9 MODERN SPRAY POSTAL MARKINGS

In January 2006 a new style of postal making was introduced. These marking are computer generated and are sprayed on to the postal item. Over several months these devices were installed in the central mail processing centers throughout the country. Currently they are in use only for letter size mail.

Initially the killers consisted of six wavy lines. For a few months an attempt was made to switch to a killer that consisted of two pairs of two wavy lines each. It is not clear whether this was a planned change that proved unsatisfactory, or an interim measure while the six line killers were perfected.

Twelve machines were installed in the Denver General Mail Facility. Each machine is designated by a number - 1 to 12 - and has two postmark positions. The position is identified by a letter: L = leading position and T = trailing position. That means there are twenty-four varieties with each style of killer.

It would seem that since these markings are computer generated it would be easy to create slogan and promotional message killers and that a flood of such markings would result. This has not been the case. Some have appeared, most notably for Christmas 2006 and the United Way Campaign the same year. As with the standard killers, there are twenty-four varieties of each of these slogans.

In 2007 a slogan was introduced to promote Kidney Month. This marking was used at several post offices throughout the country, including Denver. However, the Denver Post Office produced a design in which the lettering was too large to fit the box of the killer. The fourth line "KIDNEY FOUNDATION" failed to appear in the killer, leaving a rather nonsensical inscription. The marking was in use only a few days and was not corrected. Apparently only one machine in Denver was actually used - machine 2, producing markings 2 L and 2 T. Denver was not the only postal center to make this error.
In 2007 a new version of the Christmas slogan was placed in use. In 2008 a slogan promoting the HBO Series on the life of John Adams was introduced. It can be expected that there will be a new Christmas slogan in 2008.

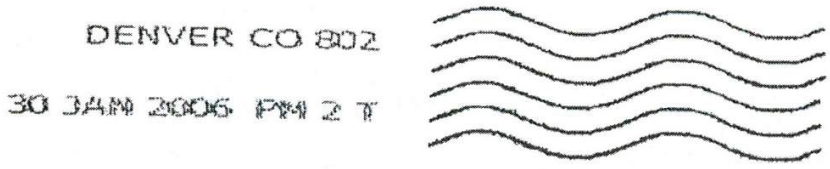

Introduction of the spray style of postmarks has created a new avenue for postmark collecting. It will be interesting to see what develops in the future.

SPRAY MARKINGS WITH SIX WAVY LINE KILLERS

When each group of these spray markings is examined, one finds that they are virtually identical. There are slight variations in the length of the date stamp portion, largely due to accommodating the double digit machine numbers.

Therefore, I have made the decision to illustrate only one of each group.

1.10 "PROOF" MACHINE POSTMARK

The status and purpose of this marking is unclear. It is undated on an unaddressed envelope; therefore I suspect that it was a proof strike of some form. However, I do not know whether it was a proof of the dial (Denver) or of the slogan (New Britain).

Confirmed types of postal markings

9999.9	**DENVER / COLO.**	**--- -- 1950**
		Slogan in box with bars: Undated, unaddressed cover, this appears to be a trial proof of some sort.
		NEW BRITAIN / CENTENNIAL / 1850-1950

2.0 DENVER GENERAL MAIL FACILITY

****

Following the completion of the large mail processing facility on the eastern edge of Denver, mail processing was shifted from the downtown post office to that location. Subsequent postmarks included the letters GMF for General Mail Facility. Some other markings included the letters P&DC for Processing and Distribution Center. Those markings are grouped in this section.

The Ink Jet Straight Line Postmarks are an exception to what is in this section. They are included with the other such markings in Section 1.8, above.

3.0 U. S. POSTAL SERVICE DESIGNATED POSTMARKS

****

In the early 1970's the U. S. Postal Service instituted a plan to do away with town of origin postmarks at the large post offices and the regional processing centers. In place of postmarks that contained a town name postmarks that stated only "U. S. Postal Service" and the three digit Zip code were placed in use. This style of marking met with almost no public support and within a few years they were phased out and there was a return to location designated postmarks.

The designation was incorporated into the full variety of postal markings and many such types have been observed from Zip 802 - Denver.

Although the markings were discontinued in the mid-1970' they have occasionally made brief reappearances.

Confirmed types of postal markings

4.0 SPECIAL SERVICE AND AUXILIARY MARKINGS USED BY THE DENVER POST OFFICE

****

Over the course of its history the Denver Post Office has employed a number of markings noting the special services supplied by the post office. In addition there have been many markings that were "informational" in purpose - to advise postal patrons of problems with their mail or actions the patrons should take to improve their mail service.

I have grouped these markings together based on the service or purposed for which they were employed.

Please note that some markings did not include the name of the post office. The listing for those markings will usually be shown with the town designated as "denver," that is uncapitalized. Other formats are used for the listings where appropriate.

5.0 FIRST DAY OF ISSUE AND SECOND DAY POSTMARKS FROM DENVER

****

FIRST DAY OF ISSUE

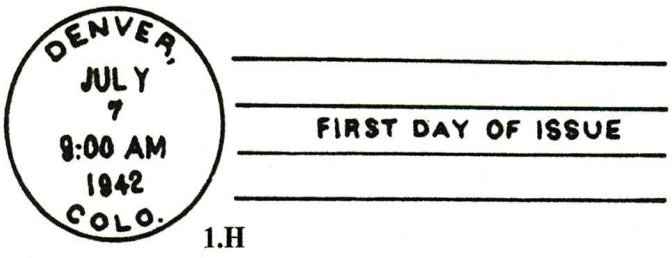

I suspect that there are omissions from this listing of First Day of Issues that were held in Denver. I am certain that there are varieties of first day postmarks that are not included. It was common practice to have both a handstamp and a machine postmark for each First Day of Issue and often more than one style of each.

Confirmed types of postal markings

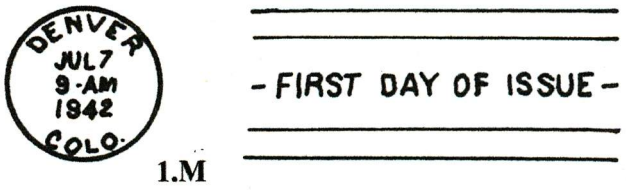

First Day of Issue - 5 cent Chinese Resistance (Scott 906)
