*Established: March 9, 1877*

*County Seat: Westcliffe*

## **CUSTER COUNTY**

By William H. Bauer

Custer County lies west of Pueblo and south of Canon City at the northern end of the Wet Mountain Valley. Originally it was part of Fremont County but on March 9, 1877 it was separated from Fremont County with Rosita designated the county seat. I have seen a reference that states that Ula was the first county seat but I suspect that was a temporary, unofficial status that was superseded by the legislation that created the county and was confirmed by an election.

Rosita remained the county seat until 1891 when it was moved to Silver Cliff. The move reflected the decline in the mining fortunes and population at Rosita. A similar fate would befall Silver Cliff when, in 1931, it lost the county seat to its close neighbor Westcliffe.

The creation of Custer County was a result of the discovery in 1872 of rich silver deposits in the vicinity of Rosita and the formation of the Hardscrabble Mining District. The mines at Rosita were not long lasting but the 1878 discovery at Silver Cliff was more extensive and brought a gradual shift of commercial activity to that community.

Topographically, Custer County occupies the northern end of the broad valley between the Wet Mountains on the east and the Sangre de Cristo Mountains on the west. The crest of the Sangre de Cristo range forms the western boundary of the county. The southern boundary is the divide between the drainage of southward flowing Huerfano Creek and of northward flowing Grape Creek. The eastern portion of the county is a part of the Wet Mountains with the county boundary determined by the line between Ranges 68 and 69 West. The north boundary is the line between Townships 20 and 21 South. The result is an irregular shaped county with a maximum east-west dimension of 41 miles and a maximum north-south dimension of about 27 miles. While Grape Creek and its tributaries drain much of the county, Hardscrabble Creek drains the eastern third of the county and a small portion of the northwestern corner drains north via Texas Creek. All of the drainage eventually reaches the Arkansas River. The surrounding counties are Fremont on the north, Pueblo on the east, Huerfano on the south and Saguache on the west.

The first railroad into the county came up Grape Creek from Canon City. This steep, narrow canyon was extremely susceptible to violent floods and after a few extensive, repeat washouts, the Grape Creek route was abandoned and a new grade was constructed from the Arkansas River up Texas Creek. In its usual style, The Denver and Rio Grande Railroad did not build to the existing community of Silver Cliff but established a new community, Westcliffe, less than two miles west of Silver Cliff. Perhaps the Rio Grande chose not to build that last mile or so up the steep grade to Silver Cliff. With the decline in mining, the railroad could no longer support its heavy maintenance costs and it was gone before the middle of the twentieth century.

The Wet Mountain Valley is traversed north to south by Colorado Highway 69 from Walsenburg through Westcliffe to Texas Creek on the Arkansas River. From Pueblo, via Wetmore in the northeastern corner of the county, Colorado Highway 96 enters the county and terminates at Westcliffe. The eastern edge of the county is served by Colorado Highway 165 which originates at Colorado City on Interstate 25, goes through Rye and intersects Colorado 96 about 15 miles east of Westcliffe. There is a mostly gravel road from Canon City that roughly parallels Grape Creek, ending at Silver Cliff. It is only in recent years that access to Custer County has become a smooth ride.

I first visited Custer County in the summer of 1951. We drove up the valley from Walsenburg on a dirt road that for the most part was little more than two ruts with plank bridges over some of the dry washes. It was a long, slow, careful trip. My second visit was in the early 1970's and part of that road had been paved, but some of it was still a rutted dirt road. By my next visit, in the mid-1980's, all of the

road was paved and at last the driver could enjoy the magnificent scenery that the Wet Mountain Valley offers.

Mining created Custer County and was the driving force behind its development from the 1870's until the early twentieth century. However, agriculture has also played a major part in the economy of the county. Before the discovery of silver, ranching had been established in the valley. At Colfax, Carl Wulsten created the German Colony as a farming community but the semi-arid climate and a short growing season doomed that effort. With the decline of mining, ranching again became dominant. Lumber has also been a significant contributor to the county's economy. Another factor in the economy is recreation: hunting, fishing and hiking in the Sangre de Cristo and the Wet Mountains.

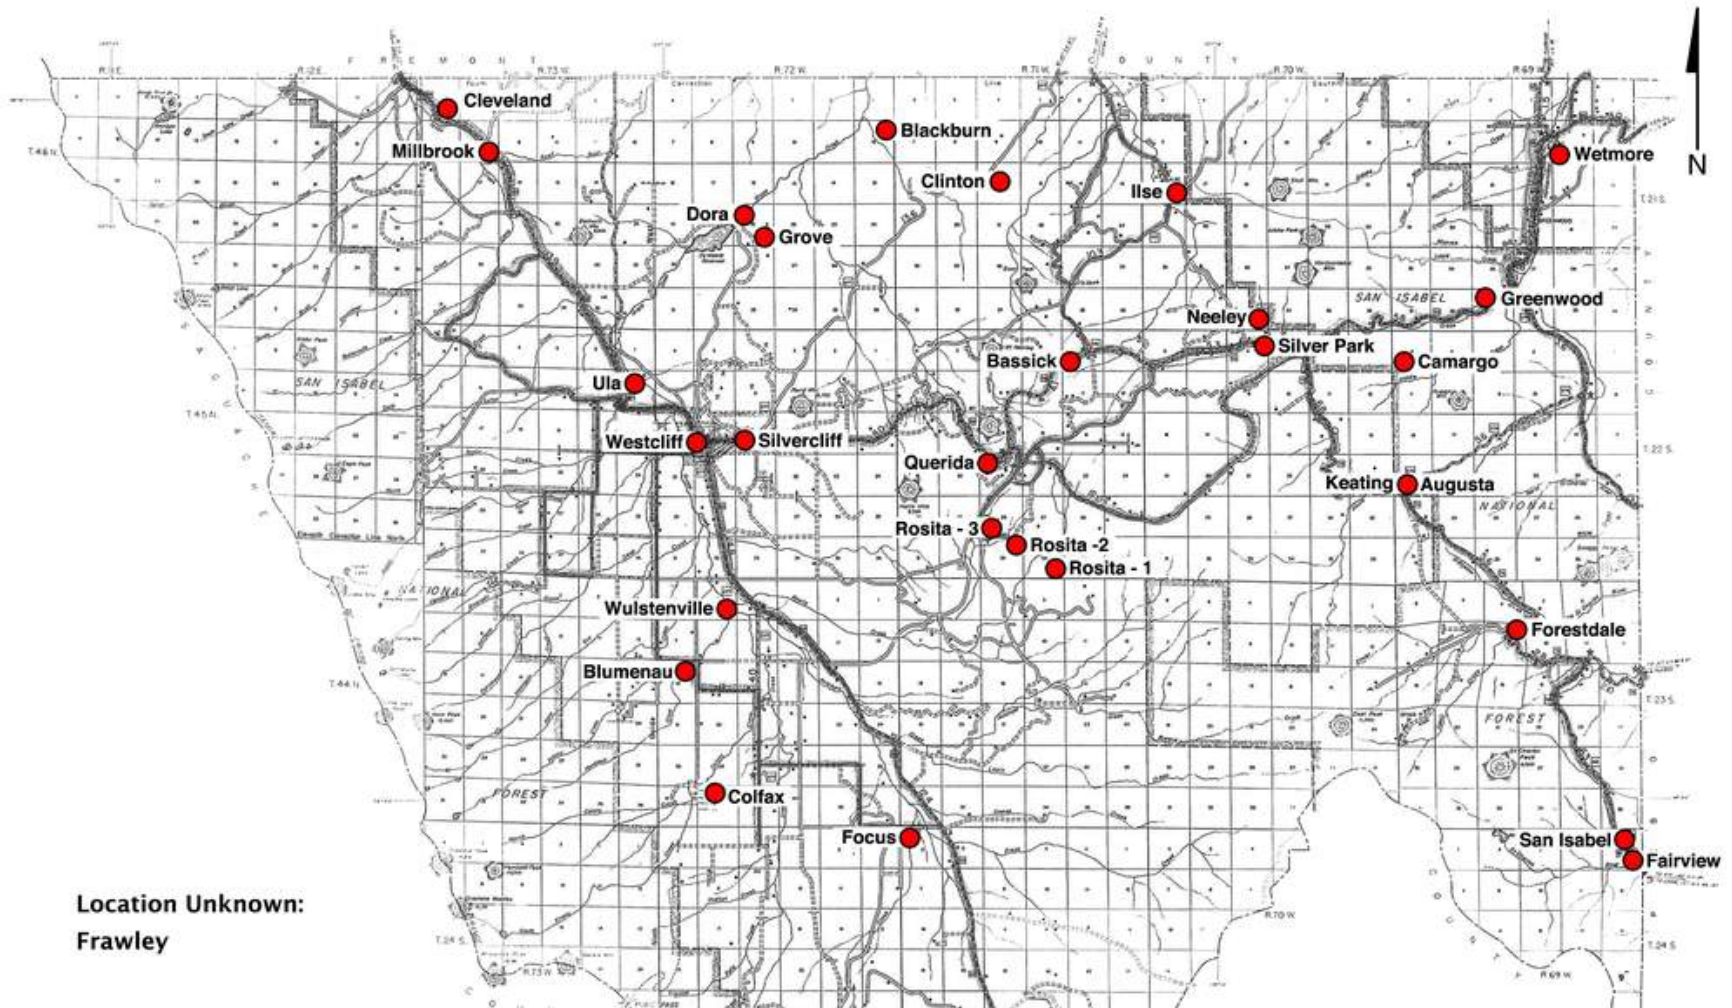

At the end of the twentieth century, another factor has come into play in the area – residential development. Throughout the northern end of the county there are a number of ranches that have been subdivided and the countryside is scattered with an increasing number of substantial homes. I suspect that many are summer homes but some are year-around dwellings. With that new activity there are many new roads and it is easy to get confused without a current map.

Although Silver Cliff has declined, Westcliffe is experiencing some growth and even Rosita is experiencing a revival. With all of the changes through time, the Wet Mountain Valley continues to provide a drive through spectacular scenery.

**SRM Note:** There is considerable uncertainty as to the exact location of several of the ghost towns of Custer County. The site reports are sometimes in error and driving directions given do not always agree with the site reports. It would seem to be an area that would benefit from in-depth historical/geographical research.

**Custer County – Ranch complex near site of Colfax**

Post Office Location Map – Custer County

## AUGUSTA

There is no mention of Augusta in the historical literature. This was also the location for the Keating post office. The name originally requested was Leeville, most likely for the first postmaster, Edwin Lee Drake.

**Ranch complex at the site of Augusta (1889-1902) and Keating (1914-1924)**  
 Photograph by William H. Bauer May 19, 1999

The site of Augusta is on the South Fork of Hardscrabble Creek and Colorado Highway 69, six miles south of the junction with Colorado 96, the road from Pueblo to Westcliffe. There is an active but old ranch complex on the west side of the road with several buildings. Augusta may have served as a way stop for travel on the road from Rye and the south.

Do not confuse this Augusta with a later Augusta Post Office in Las Animas County.

### Confirmed types of postal markings

**NO POSTAL MARKINGS HAVE BEEN REPORTED FROM AUGUSTA**

## **BASSICK**

It has been claimed that Bassick and Querida were the same place. It is very likely that the original settlement at Querida was indeed known as Bassick City or Bassickville; however, the Bassick Post Office is believed to have been at a location on present day Colorado Highway 96, about three miles northeast of Querida and the Bassick Mine.

I have visited the plotted location of Bassick, on the highway and approximately one mile west of County Road 271 north to Ilse and two and a half miles east of County Road 341 south to Querida. There is nothing there to support the previous existence of a settlement, so there is still some question as to the exact location of Bassick.

Latitude = 38:07:38 North Longitude = 105:19:57 West (BASSICK MINE) This would more properly be called Querida.

### **Chronology of the Post Office**

## **BLACKBURN**

Blackburn was in Grape Creek Canyon about where Dead Mule Gulch from the south joins Grape Creek. It was on the Denver and Rio Grande Railroad branch from Canon City to Silver Cliff.

Reportedly the town was named for a Mr. Blackburn, an Englishman who owned a ranch in the area. There was some mining in the area and as a stop on the railroad; it also served nearby Titusville (Fremont County).

In the mid-1880's Grape Creek was struck by two violent floods that destroyed large segments of the railroad. After the second flood the railroad was abandoned and Blackburn lost any importance that it previously enjoyed.

Today, there is no road leading to the site of Blackburn, although, with the rapid development of rural Custer County, that may not remain the situation. Many new roads traverse the hills and using an older map it is easy to become confused.

**BLUMENAU**

The settlement of Blumenau is connected to that of the German Colonization Society and the community of Colfax. Some references claim that Blumenau was another name for Colfax. In 1879 the Colfax Post Office was moved to Blumenau but this was a move of some three miles.

Blumenau was an agricultural and ranching community in the Wet Mountain Valley five miles due south of Westcliffe in the upper reaches of the Grape Creek drainage. There is no evidence that there was an organized town, perhaps at best a few homes and businesses clustered together.

From the center of Westcliffe, drive four and one-half miles south to Colfax Lane. Continue south one mile then turn west for one and one-half mile to Colony Lane. Blumenau was at this intersection.

There are still active ranches in the surrounding countryside and there are an old ranch house and barn in the northeast corner of this intersection. Eight-tenths of a mile south, on the east side of Colony Road is the Hope Cemetery.

Modern development in Custer County has added a confusion factor to the history of Blumenau. The Blumenau name has been adopted by a modern, rural development in the hills between the site of Querida and the remnants of Rosita. Other than the name, this development had nothing to do with the original Blumenau.

**CAMARGO**

Camargo was a small, short-lived mining camp in the vicinity of Silver Park. I am not certain of the precise location as various reports present contradictions.

One report claims Camargo to have been an, "...isolated mining camp three miles east of Rosita." No other information fits with this description. Another source refers to a 1922 map that locates Camargo a short distance east of Silver Park.

The single Post Office Department Geographic Site Location Report is in itself confusing. It references Camargo to Oak Creek but the given survey location is a little more than a mile south of Hardscrabble Creek and would not be on the Pueblo-Silver Cliff Road as stated.

My best guess is that Camargo was on the Pueblo-Silver Cliff Road, present-day Colorado 96 and on Hardscrabble Creek, about four miles east of the site of Silver Park and three miles west of the intersection of Colorado 96 with Colorado 165.

There is more confusion with the spelling of the name. Nearly all records give it as Camargo. However, the Geographic Site Location Report spells it as Comargo.

In any case, it was small, had a brief existence and nothing remains. Perhaps someone can supply more conclusive information on the whereabouts of Camargo.

**NO POSTAL MARKINGS HAVE BEEN REPORTED FROM CAMARGO**

**CLEVELAND**

Almost nothing is known about Cleveland. Cleveland is shown on an 1885 map as about six miles northwest of Ula. There is a claim that it might have been an early name for a place called Verdemont. There is no further information about this latter named place. Cleveland also appears on an 1887 map and is claimed to have a population of 30 at that time. If this were true, then it would represent a small group of ranches or farms.

The best information I have places the site of Cleveland on present day Colorado 69 immediately south of the Fremont County line. This would be in Section 2, Township 21 South, Range 73 West and not Range 72 West as claimed in the Geographic Site Location Reports.

Driving south from Fremont County, immediately after crossing the county line the road curves sharply to the east. Within the confines of this curve, are the older buildings of a small ranch complex. This seems to be a likely location for Cleveland. This is less than a mile south of the Hillside Post Office in Fremont County.

**Confirmed types of postal markings**

**NO POSTAL MARKINGS HAVE BEEN REPORTED FROM CLEVELAND**

**CLINTON**

Clinton was a multi-purpose community about ten miles northeast of Silver Cliff on the road to Canon City. In addition to having a post office, it was a stage stop, had a sawmill, about a dozen buildings and a large store built by a Mr. Fleming. There was mining activity in the area but apparently it was only marginally successful.

In 2001, there remains no collective community but there are several residences and ranches in the vicinity of the site. While many of the buildings are of recent vintage, there are some scattered older buildings.

From Colorado 96, turn north on County Road 271 (there was a sign directing travelers towards the Bear Basin Ranch). In a mile and half at the intersection with County Road 265, you have to make a decision. Continuing on Road 271 will take you to the site of Ilse. Road 271 will re-intersect Road 265 about two miles beyond Ilse.

If you choose Road 265, it is about two and one-half miles to Boneyard Park which is where Clinton was located. Road 264, to the west, will take you past the remnants of some log cabins. Of course, you can continue on to the intersection with Road 271 and return to Colorado 96 by way of Ilse.

**COLFAX**

The *Chicago Tribune* of February 9, 1870 reported the following:

*A notable event in the history of Chicago transpired yesterday. It was the departure of a colony of Chicago citizens for a home in the western wilds, the first of its kind which ever left this city and the first, it is believed, ever organized in America. It is called the German Colonization Society of Colfax, Colorado.*

**COLFAX – Continued**

The Colony was the idea of Carl Wulsten who edited a German language newspaper in Chicago. In the fall of 1869 he persuaded a number of Germans to invest \$250 each in a communal colony that would secure land in the Wet Mountain Valley of Colorado. The Colony would operate for five years with the participants pooling their labor. Then the Colony would disband, the profits would be divided and each of the members would have their own plots with which to continue farming and ranching.

The big disappointment was the failure to obtain Congressional approval of a requested land grant of 40,000 acres; thus the Colony never had title to the land it occupied. In addition the unsuitability of the high mountain valley to the chosen crops, cutting government timber without permission and a growing dissatisfaction with Wulsten's leadership brought about the collapse of the Colony. Most of the members would drift on to other locations, some within Colorado.

By December of 1870, thirty families had separated their fortunes from the Colony and filed for land under the Homestead Act. Some of these survived and gradually expanded their original homestead tracts into viable ranches that even today encompass the area of the original colony.

The village was named Colfax in honor of Vice-President Schuyler Colfax whom they believed could be of assistance in obtaining the land grant.

A post office opened in June 1870 and survived until 1879 at which time it was moved about three miles north and renamed Blumenau. Some historical sources claim that the office later moved back and resumed operation under the name of Colfax. There is no information in the postal records to support that claim.

The brief hectic existence of Colfax is reflected in deciding where the Colfax Post Office was actually located.

One opinion is that it was three miles south of the location of Blumenau, described above, on Colony Lane. This location is in a grove of trees along South, Middle and North Colony Creeks. Other possible locations are a mile east, on Colfax Lane at either or both of two large ranches two and three miles south of Colorado 69. The Geographic Site Location Reports support the location on Colony Lane and also the use of the name Colfax at the later site of Blumenau.

**DORA**

The town of Dora was platted in 1879 and the name is believed to be that of the wife of a nearby rancher, perhaps William Voorhis who had homesteaded a short distance from the site. Within a year, Dora claimed a population of 100 and in addition to a post office, had a store and the Chambers smelter. The name was changed to Gove in 1885. In addition to being a minor smelting center in the area, Dora served as a construction camp for the workers building the Denver and Rio Grande Railroad branch line from Canon City to Silver Cliff.

Virtually all historical references claim that the waters of the DeWeese Reservoir now cover the site of Dora. However, the Post Office Department Geographic Site Location Report places the site along Grape Creek, just downstream from the dam that forms the reservoir.

From Westcliffe, go a short distance north on Colorado 69 to Custer County Road 241 to the northeast. Follow this road to the reservoir, but continue on to the northeast dropping down into the Grape Creek Valley to the east of the reservoir. The Post Office Department location for Dora is in the vicinity of where the road crosses Grape Creek. Portions of the old railroad grade are still visible along the creek.

**FAIRVIEW**

Although several miles separate Fairview and Beulah, Fairview has a relationship to the early settlement of Maces Hole, which eventually became Beulah. The valley in which Fairview is located was known as Second Mace. Many of the settlers of Second Mace moved there in the hope of exploiting some mining possibilities.

The explanation for the name is the pioneers thought the site offered a “fair view.” The mining possibilities did not develop but the community survived as a small resort. The construction of San Isabel Lake on the headwaters of St. Charles Creek covered the site of Fairview and created the new town of San Isabel on the north side of the lake.

Although not conclusive, it is possible that in 1907 the Fairview Post Office moved about six miles north to a location near what became Forestdale after the discontinuance of the Fairview Post Office.

The Fairview site is on Colorado 69 at the Pueblo County line. Colorado 69 crosses the dam that creates San Isabel Lake where Fairview once stood.

Latitude = 38:04:04 North Longitude = 105:05:55 West

**FOCUS**

Focus was one of several agricultural community experiments in the period following World War I. As with many other experiments of this type, the natural aridity of the country and poor dry farming methods brought failure.

It is stated that the name Focus was chosen because at the site a fine view of the Sangre de Cristo Range and the Wet Mountain Valley, “comes into focus.” The application for a post office requested the name George Town. That name was rejected for the obvious conflict with Georgetown in Clear Creek County.

**FOCUS – Continued**

In several accounts, Focus is located on Antelope Creek and the Post Office Department Geographic Site Location Report references the location to Cottonwood Creek. However, the plotted location is on Froze Creek. This is another example of the need for caution in accepting historical geographic references: names frequently change over time.

Drive south from Westcliffe to Rosita Road. From there, continue south eight miles to Colfax County Road 106 and turn west, driving down to the creek. A short distance east of Froze Creek and south of the road, near the base of a low bluff, are some debris that may be the remnants of a building or foundation. Nothing else can be easily found. The area is now part of a large ranch and is merely grazing land.

**Chronology of the Post Office**

	CI 10P 32.0	4bars S-24x19mm

**FORESTDALE**

Forestdale is mentioned only briefly in historical literature and there is no discussion of what the community was or the source of the name. From observations at the location, it was most likely a ranch post office in the mountains, surrounded by forest, hence the name Forestdale. In 2000 none of the buildings were occupied, but a half-mile south is a small development of several resort cabins.

From San Isabel drive three miles north on Colorado 165 to the intersection with the road to Beulah. Continue north on 165 another two and one half miles. This will bring you to a small valley and the site of Forestdale where there are a few older buildings to the east of the highway. As was previously mentioned, this may have been the location for Fairview in 1907.

**GREENWOOD**

Greenwood was established in 1872 on Adobe Creek, a tributary to Hardscrabble Creek. It was in an area of small farms and ranches.

Greenwood was named for Colonel William Greenwood, a construction engineer with the Denver and Rio Grande Railroad. This small connection with the railroad has led some historians to class Greenwood as a railroad town; however, there never was a railroad to or through Greenwood.

From Wetmore drive about two miles south on Colorado 96 to Greenwood Road (County Road 389) to the left. This two-mile stretch of road passes a number of small residences in what is called the modern Greenwood community.

A short distance after Greenwood Road reconnects to Colorado 96 the latter road makes a sharp turn west into Hardscrabble Canyon. On the west side of the road is (in 2001) the Farley Ranch. This neat, well-kept ranch was the early site for Greenwood.

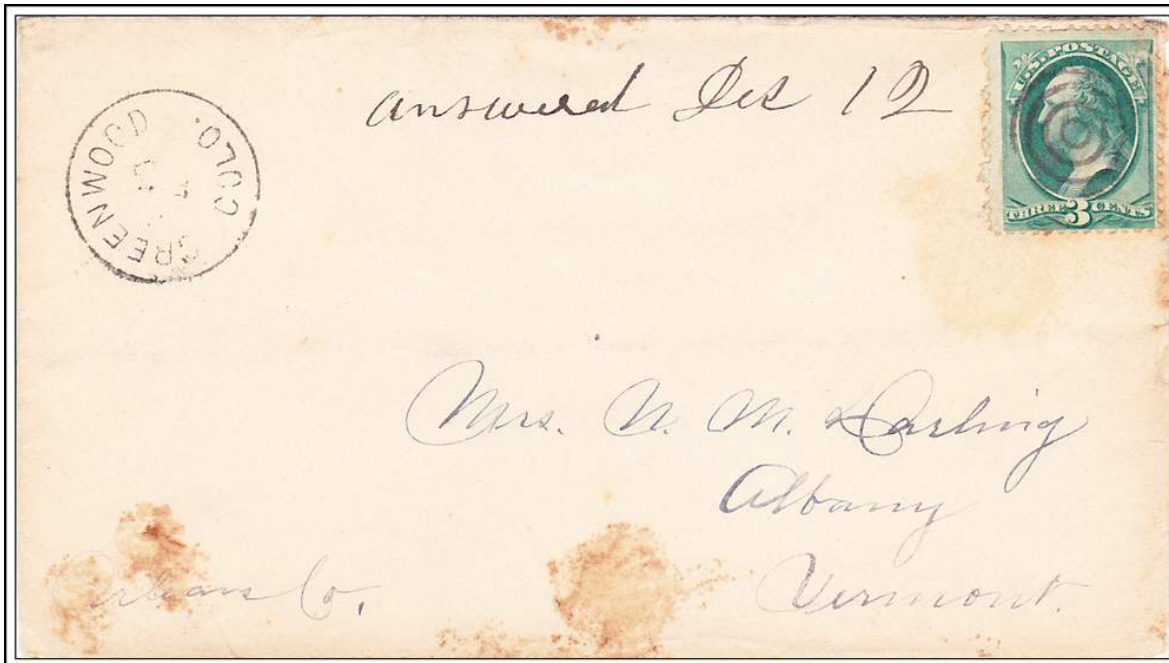

Latitude = 38:12:18 North Longitude = 105:05:47 West

**ILSE**

Ilse was a mining town about twelve miles northeast of Silver Cliff. The initial discovery is attributed to a Dutch immigrant farmer named Frank Andracich. The first production may have been some gold but silver produced from lead carbonates was the more important resource. The Temble was the best mine in the area.

In 1887 a fire destroyed much of Ilse and little was rebuilt. Even though a large mill was built at Ilse in 1903, several small flurries of activity never brought back the many residents and businesses that were there prior to the 1887 fire.

The settlement was for a short time known as Spaulding. The application for a post office requested the name Elsenburg, but that choice was rejected. I have found no reason for the final choice of Ilse. Perhaps it was a variant on Elsenburg.

From Colorado 96, turn north on Custer County Road 271, the access to Clinton that has been previously described. Stay on Road 271 for about six miles. As you approach the site of Ilse you will see, to the west of the road, the remnants of the large mill. On the east side of the road is an open pit mine, partially filled with water. Both of these features are on a small rise in the road from which you can look north over the site of the town of Ilse. There are a few residences in the area and activity is confined to ranching.

**KEATING**

Keating was the name applied from 1914 to 1928 to a post office at the former site of the Augusta Post Office. Keating was likely only a ranch post office and there is still an active ranch at the location. Please refer to the discussion of Augusta for directions to this office.

In 1924 when application was made for a post office, it appears that the request was to reinstate the older name of Augusta. However, at that time the Augusta Post Office in Las Animas County was still in operation so another name was needed. I do not know why the name Keating was chosen but I do know that there was a Keating family present in the general area.

**MILLBROOK**

Millbrook has escaped mention in the historical literature. The Post Office Department Geographic Site Location Reports do provide a survey description for the site (see below).

From the junction of Colorado Highway 69 and County Road 241, drive north nine miles. To the west of the highway and Texas Creek is a small ranch complex. This is the vicinity for the Millbrook Post Office. It would appear that it was no more than a ranch post office serving the surrounding community.

**NEELEY**

Neeley is yet another town for which I must rely on the Post Office Department Geographic Site Location Reports.

The original request was for the name Neeleyville, however that was shortened to Neeley. The name is obviously for that of the first postmaster - William G. Neeley.

To reach the site of Neeley, begin on Colorado 96 at the junction with Custer County Road 285 to the north. Drive north on this road about one mile to its end. At that point there are the remnants of a stone building, a log building and a sawmill. This is what remains of Neeley.

## **QUERIDA**

In 1877 a former sailor named Edmund G. Bassick located an unusual mineral deposit. He gave his name to the claim and soon a town grew up around the mine and took the name Bassickville. This is not to be confused with the later settlement of Bassick, which was about three miles to the northeast, on present-day Highway 96.

As the community grew, the mine was acquired by a New York company and the name of the town was changed to Querida, Spanish for, “darling” or “beloved.” The new name is often attributed to David Livingstone, nephew of Dr. David Livingstone, the African explorer. Another source attributes the name to a Mrs. Francklyn. To a large extent Querida was a company town with a population of as many as 500, three stores, a livery stable, two drug stores and considerable mining activity including a smelting plant. By 1883 a large, three-story hotel had been erected.

The Bassick Mine was a major producer but like many mining operations it was continuously involved in lawsuits for more than fourteen years. Eventually the mine became flooded and soon Querida died.

From Colorado Highway 96, about halfway between Silver Cliff and the junction with Colorado 165, turn south on Custer County Road 341. About a mile south you will come to a very large tailings pile on the east side of the road. This is what remains of the Bassick Mine. Querida was mainly on the east side of the road. In May 2001 there were still two dilapidated structures and scattered trash in the area.

The best view of Querida and the Bassick Mine is from the ridge to the southwest that can be reached by continuing south around the hill and up a side road to the west to a saddle on the ridge from where there is an excellent overview of the mine.

**ROSITA**

In late 1872, prospector and writer Richard Irwin and two companions, W. J. Robinson and James Pringle, with V. B. Hoyt in absentia, formed the Hardscrabble Mining District and established a camp first known as Brown's Spring. Thornton was the next name applied to the settlement. But, in short order the growing community became known as Rosita (Spanish for, "little rose") in reference to the many wild roses growing in the area.

By 1873 Rosita had a blacksmith, several carpenters, an assayer, a second store and a growing number of hopeful citizens. There were even a cheese factory and a brewery at Rosita. The Humbolt-Pocahontas Mine was the principal producer but by 1876 it was in decline. The discovery of the Bassick mine at nearby Querida gave a boost to Rosita and mining activity continued in the vicinity for the remainder of the nineteenth century and into the twentieth century. Rosita was platted in 1875 and patented in 1876.

Custer County was divided from Fremont County on March 9, 1877. Rosita was the first county seat and held that position until 1891 when it lost the office to Silver Cliff. With mining coming to an end, Rosita would begin a decline that culminated in 1966 with the closure of the Rosita Post Office.

In later years Rosita was the location for filming of the movie, "Saddle the Wind." In the last few years Custer County has seen considerable part and full-time residential development with new homes scattered about the countryside. A number of new homes have been built around and in Rosita and very little remains from the early days.

The building that last housed the post office is on the western edge of Rosita and is now (year 2000) the Letter Drop Inn, a gourmet restaurant open evenings.

From Westcliffe, drive south on Colorado Highway 69 three miles to Rosita Road. Drive east six miles to Rosita, passing the Letter Drop Inn as you enter the community.

**SAN ISABEL**

In 1933 H. T. Ashley and associates built a lodge on the north side of the St. Charles River and San Isabel Lake. They also erected 20 cabins for summer visitors. From those beginnings San Isabel has grown into a small resort and summer residential community with stores to serve the visitors. The older community of Fairview was once located on the St. Charles River, now covered by the lake.

The San Isabel Post Office was one of the few independent offices to be established in Colorado after 1930.

San Isabel is on Colorado Highway 165, one mile north of the Pueblo County line.

**SILVER CLIFF**

On June 29, 1878, R. J. Edwards, Robert Powell and George Hoffard made the initial mineral discovery in a thirty-foot high, stained porphyry cliff. The ore was very rich in silver and was called horn silver. McElhenny and Wilson built the first house in September of 1876. Ed Norris and Ed Austin laid out Cliff and Mill Streets and the Horn Silver Saloon was soon dispensing product to the growing population. The small frame building also contained a general store and the first post office of Silver Cliff.

Silver Cliff was incorporated February 10, 1879. But it was not until December 8, 1879 that W. H. Holmes laid out the townsite and patented the town. Miners rushed into the area and a number of quality mines were soon in operation. Among the best mines were the Horn Silver, Racine Boy and the Silver Cliff.

In 1880 Silver Cliff was devastated by fire. It was rebuilt but was struck again by fire in 1882. To tap the rich mining area the Denver & Rio Grande Railroad built a branch line from Canon City up Grape Creek to the edge of Silver Cliff. The railroad never made it up the last steep grade into the town and by stopping short it soon became the reason for the establishment of Westcliffe. This situation was reinforced when frequent, violent floods forced the abandonment of the Grape Creek route and the construction of a new branch line from Texas Creek on the Arkansas River also terminated at Westcliffe.

An election in 1891 resulted in the Custer County seat being moved from Rosita to Silver Cliff. In 1931 the county seat moved again, down the hill to Westcliffe.

The Silver Panic of 1893 began the decline of Silver Cliff in favor of Westcliffe. The decline has continued but Silver Cliff is still on the map with a modest number of residences scattered about the old street pattern.

The name is an obvious reference to the initial discovery of silver ore in a cliff near the town.

A curiosity has always been the close proximity of post offices at Silver Cliff and Westcliffe. This situation lasted for over 100 years. In the 1990's the Silver Cliff Post Office moved to Westcliffe and for a short time operated from the same building in the center of town and perhaps with the same postmaster. By 1992 a new post office had been built on the east edge of Westcliffe, but it is designated as Westcliffe, CO 81252 - Silver Cliff, CO 81249.

Silver Cliff is located on Colorado Highway 96 a little over a mile east of the junction with Colorado Highway 69 in Westcliffe.

Latitude = 38:08:07 North Longitude = 105:26:45 West

**SILVER PARK**

Silver Park was a wayside ranch, on the wagon road to Rosita from Pueblo, near the head of one of the branches of Hardscrabble Creek. There was some mining activity in the area but it was more important as a supply town for mines and ranches.

The name was a combination representing the silver mining activity and the small, park-like setting where it was located.

From the junction of Colorado Highways 165 and 96 (McKensie Junction) drive west one and one-half miles on Highway 96. There is an occupied ranch complex with some older buildings on the north side of the highway. County Road 285 (to the Neeley site) begins here.

**ULA**

In September 1871 Joseph A. Davies settled at what would soon become Ula. He erected a hotel and also kept a store in the same building. A post office was acquired on December 1, 1871 and as others came to the area a small community developed. It was the first town in the northern Wet Mountain Valley to achieve any semblance of permanence. The post office would last for twenty years before the prominence of nearby Westcliffe caused its closing.

**ULA – Continued**

One reference claims that Ula was the first county seat of Custer County but that claim is not supported by any other reference. The origin of the name is not clear. One version claims that the settlers intended to name the town after the Ute Indian Chief Ure, however the name was either misspelled or misread by the Post Office Department. A more prosaic version is that it was named for the wife of one of the early settlers.

There was some attempt at mining near Ula but it soon petered out. A number of hunters came to the valley from England. Some stayed to become ranchers and the community acquired a nickname of "Briton's Paradise."

On the northern outskirts of Westcliffe, turn west from Colorado Highway 69 onto Pines Road, which in a little over a mile turns north. Keep heading north and in about one mile you will find a large, well kept ranch on the west side of the road. In 2001 there was an ornate gate with the legend "TOWN OF ULA / STORE AND POST OFFICE."

From the *SILVER STATE RECORD - Volume 1, Number 9, January 1964, page 6:*

*In the place names column of the October issue, SILVER STATE RECORD, Ula in Custer County was one of the place names used,*

*A recent subscriber Mrs. Herbert Kettle, has written as follows.*

*"I married the son of one of the Englishmen who settled in the Ula area in Custer County, Colorado. He attended school in the Ula School House and remembers Joseph Davis, the first postmaster.*

*"The large farm house, landscaped with trees, lawn, and white fence is on the site of Ula, and was the original hotel and post office. The old meat market which was a log building, is used as a grainery. The Ula School House has been remodeled into a modern cottage. It is south of the "Hotel."*

*We toss a SILVERED BOUQUET to Mrs. Kettle for sending us this welcome information.*

**WESTCLIFFE**

In the spring of 1881 the Denver and Rio Grande Railroad (narrow gauge) arrived in the Wet Mountain Valley near Silver Cliff. In usual Rio Grande fashion they established their own town and although at first known as Clifton, it soon took the name Westcliffe. One source asserts that Dr. William A. Bell, an associate of D&RG founder William Jackson Palmer chose the name in honor of his birthplace, Westcliffe-on-the-Sea in England; however, Bell was born of an English family in County Tipperary, Ireland. Another idea is that its location, a mile west of Silver Cliff dictated the choice. The name certainly fits the location with relation to Silver Cliff, but the addition of the final “e” would lend credence to English parentage.

Westcliffe was incorporated November 21, 1897.

With the railroad on which to center its growth, Westcliffe soon became the most prominent town in the Wet Mountain Valley, eclipsing earlier Silver Cliff but it was not until 1931 that it could claim the county seat.

Westcliffe has survived the end of mining activity in Custer County and a decline in agricultural and lumbering activity. As the twentieth century came to a close, the northern portion of Custer County began to develop as summer recreational and residential area. Westcliffe is the supply and trading center for this growing population, some of whom have become year-around residents.

Westcliffe is near the center of the county where Colorado Highway 96 from Pueblo intersects Colorado Highway 69 from Texas Creek on the Arkansas River south to Walsenburg.

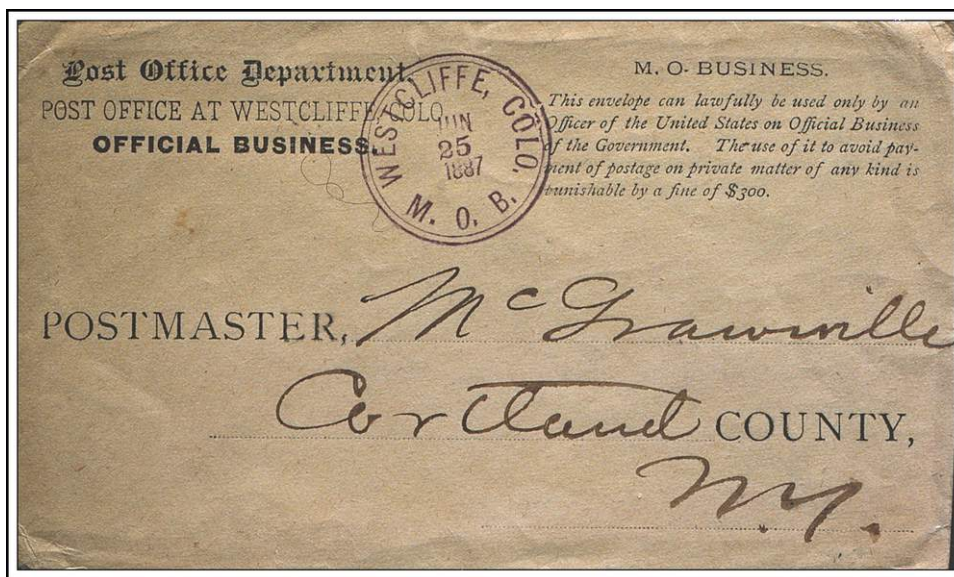

Latitude = 38:08:05 North Longitude = 105:27:55 West

## **WULSTENVILLE**

Wulstenville is named for Carl Wulsten, the organizer of the short-lived German Colonization Society of Chicago, which was responsible for a number of German families moving to the Wet Mountain Valley in 1870. They established the community of Colfax a few miles to the southwest of the Wulstenville site.

Wulsten himself made the application for this post office and gave it his name. It survived for only six months, by which time the Colony itself was in serious trouble and would soon fall apart. It is most unlikely that there were ever more than a few ranch buildings at this location.

The plotted location for Wulstenville is on the west side of Colorado Highway 69 north of the intersection with Colfax Road and about one mile south of Rosita Road. At this location, below the highway embankment is a cluster of old ranch buildings, still in use. From the highway, with the Sangre de Cristo Mountains as a backdrop, this is an excellent photo site.

**GEOGRAPHIC SITE LOCATION REPORTS OF THE POST OFFICE DEPARTMENT**

These are documents filed with applications for the approval of a new post office, at the time of a move of a post office and upon periodic requests of the Post Office Department. The documents may include a detailed location using the Federal Land Survey System, reference of distance to local streams and rivers, to railroads and to nearby existing post offices.
